IT is the aim of this Dictionary of Musical Terms to furnish an accurate and concise explanation of any technical word or phrase which the student is apt to meet with. The English vocabulary will be found practically exhaustive. Want of space forbade making the foreign vocabulary equally so; but the editor has endeavored to preserve a proper balance by giving any term, appearing in either German, French, or Italian, in each of those languages, thus maintaining a consistent polyglot character so far as necessary limitations permitted.

The scope of the work, which is rather a dictionary than a lexicon, rendered the editor's task more that of a compiler than of an original investigator. Most of the material here presented has been gleaned from numerous standard works of reference, such as those of Grove (Dictionary), Riemann (Musik-Lexikon), Gevaert (Instrumentation), Weitzmann (History of Pianoforte-Playing), Stainer and Barrett, Ambros (Geschichte der Musik), Paul (Handlexikon), Soullier (Dictionnaire), Helmholtz (Tonempfindungen), Niecks, The Century Dictionary, many English, German, French, and Italian periodicals and musical journals, etc., etc. Literal quotations are duly credited to their sources; condensations and adaptations, however, are, for obvious reasons, not so credited, and must, therefore, be included under this general acknowledgment. The information so gathered has been carefully sifted, and supplemented by the personal researches of over ten years.

Due credit should be given to Dr. William Mason for suggesting the Supplement, containing an "English-Italian Vocabulary for Composers", to which Dr. Mason also contributed valued additions.

HINTS ON PRONUNCIATION.*

ITALIAN.

Vowels :

General rule : The vowels are very open, and never to be pronounced as impure vowels or diphthongs ; they are *long* in accented syllables which they terminate,—*short* in unaccented syllables, or in accented ones ending with a consonant.

- a like *ah* or *āh* (never *ä*) ; e.g. *amare* [pron. äh-mah'-rēh].
 e “ *ay* in bay (without the vanish *i*) ; *ē* in bed ; *a* in bare (before *r*).
 i “ *ee* in beet ; *ī* in bit ; *i* before a vowel, like *y* (consonant).
 o “ *aw*, or *oh* (without the vanish *ū*) ; *ō* in *ōpinion*.
 u “ *oo* in boot ; *u* in bull.

Consonants :

General rule : Even the hard consonants are somewhat softer than in English ; the soft consonants are very delicate.

- b, d, f, l, m, n, p, qu, s, t, v, as in English.
 c like *k*, before *a*, *o*, *u*, or another consonant except *c*, as below.
 c “ *ch* in chair before *e* or *i* ; cc like *t-ch* before *e* or *i*.
 g “ *g* hard before *a*, *o*, *u*, or another consonant ; except before *l* (pronounce *gl* like *l-y* [consonant], e.g. *sugli*, [pron. sool'-yē]), and *n* (pronounce *gn* like *ñ* in cañon [kan'-yon]).
 g “ *z* in azure (or a very soft *j*) before *e* or *i*.

h is mute.

j like *y* in you.

ʀ, pronounce with a roll (tip of tongue against hard palate).

Where a doubled consonant occurs, the first syllable is dwelt upon ; e.g. in *ecco* [pronounce ek'-ko, not ek'-o].—Accented syllables take a less explosive stress

than in English, being prolonged and dwelt upon rather than forcibly marked.

- sc like *sh*, before *e* and *i*.
 z “ *ds* (very soft *ts*).

GERMAN.

Vowels :

The simple vowels as in Italian ; *y* like German *i* or *ü*.

Modified vowels :

- ä like *a* in bare, but broader ; *ē* in bed.
 ö has no English equivalent ; long *ö* can be pronounced by forming the lips to say *oh*, and then saying *ā* (as in bay) with the lips in the first position ; short *ö*, by saying *ē* (as in bed) instead of *ā*. [N.B.—Long *ö* is the French *eu* (in *jeu*)].
 ü has no English equivalent ; pronounce long *ü* by forming the lips to say *oo* (as in boot), and then saying *ee* (beet) with the lips in the first position ; short *ü*, by saying *ī* (as in bit) instead of *ee*. [N.B.—Long *ü* is the French *u*.]

Diphthongs :

- ai and ei like long *ī* in bite.
 ae like *ä*.
 au “ *ow* in brow.
 eu and äu like *oi* (more exactly *ai'ü*, closely drawn together).

Consonants :

- f, h, k, l, m, n, p, t, as in English.
 b and d, beginning a word or syllable, as in English ; ending a word or syllable, like *þ* and *t* respectively.
 c like *k* before *a*, *o*, and *u* ; like *ts* before *e*, *i*, and *ä*.
 g usually hard, but like *z* in azure in words from the French and Italian in which *g* is so sounded ; —*ang*, *eng*, *ing*, *ong* and *ung* terminate, at the end of a word, with a *k*-sound (e.g. *Be'-bung^k*).

* These “hints” are offered as an aid for tyros, and not in the least as an exhaustive set of rules.

HINTS ON PRONUNCIATION.

j like *y* (consonant).

qu " *kv*.

r either with a roll, or a harsh breathing.

s beginning a word or syllable, and before a vowel, like *z* (soft); ending a word or syllable, like sharp *s*; before *t* and *p*, beginning a word, usually like *sh* (e.g. *stumm*, pron. *shtüm* [*u* as in bull]); otherwise as in English.

v like *f*.

w " *v* (but softer, between *v* and *w*).

x " *ks* (also when beginning a word).

z " *ts*.

Compound consonants:

ch is a sibilant without an English equivalent; when beginning a syllable, or after *e*, *i*, *ä*, *ö*, *ü*, *ai*, *ei*, *ae*, *eu*, and *äu*, it is *soft* (set the tongue as if to pronounce *d*, and breathe an *h* through it; e.g. *Strich*, pron. *shtrid-h*); after *a*, *o*, *u*, and *au*, it is *hard* (a guttural *h*).

chs like *x*.

sch " *sh*.

sp and **st**, see *s*, above.

th like *t*.

Accented syllables have a forcible stress, as in English. In compound words there is always a secondary accent ("), sometimes a tertiary one (""), depending on the number of separate words entering into the composition of the compound word; e.g. *Zwi'schen-akts''musik''*, *Bo'genham''merkla-zier''*. The principal accent is regularly marked (') in this work.

FRENCH.

Vowels:

a as in Italian, but shorter, often approaching English *ä*.

â like *ah*.

e " *u* in but; *e*-final is almost silent in polysyllabic words.

é " *ay* in bay.

è " *e* in there.

ê " German *ä*, and always long.

i or **î** like *ee* in beet; short *i* as in English.

o as in Italian.

u like the German *ü*.

Diphthongs:

ai like *ai* in bait; but before *l*-final, or *ll*, is pronounced as a diphthong (*ah'-ee*, drawn closely together).

aî and **ei** like *ê*.

eu, **eû** and **œu** like German *ö*.

oi like *oh-ä'h'* (drawn closely together).

ou and **oû** like *oo* in boot.

eau like *ö* long, without the vanish *u*.

Modified by a following *n*, *m*, *nd*, *nt* or *ni* at the end of a syllable, the vowels and diphthongs are nasal (exception,—verbal ending of 3rd pers. plural).

Consonants as in English, with the following exceptions:

c like *s* in song before *e*, *é*, *è*, *ê*, and *i*.

ch " *sh*.

g " *z* in azure before *e*, *é*, *è*, *ê*, and *i*.

gn as in Italian.

h is often mute; no extended rule can be given here.

j like *z* in azure.

ll after *i* is usually sounded like English *y* (consonant), and frequently prolongs the *i* (*ee*); e.g. *travailler* [*träh-väh-yay'*], *tranquille* [*trähngkee'y'*].

n nasal, see above; otherwise as in English. [The nasal effect is accurately obtained by sounding *n* (or *m*) together with (instead of after) the preceding vowel; but the sound of *e* is changed to *äh*, *i* to *ä* (in bat), and *u* to *eu*.]

m, nasal in certain situations.

r with a roll.

s-final is silent.

t-final is silent.

er, **et**, **es**, **est**, **ez**, as final syllables, are pronounced like *é*.

Accentuation. The strong English stress on some one syllable of a polysyllabic word is wanting in French; the general rule is *slightly* to accent the *last syllable*.

A.

A. 1. (Ger. *A*; Fr. and It. *la*.) The sixth tone in the typical diatonic scale of *C*-major. The tone *a*¹ (see *Pitch, absolute*) is that sounded by the oboe or other fixed-tone instr. The notation includes various rhythmic patterns and rests, with some measures marked with 'or' above the staff. The fifth system features the word 'simile [or segue]' written below the staff, and the sixth system features the word 'arpeggio' written below the staff. Absolute Music. In contradistinction to "program-music," which is supposed or intended to express (depict, portray) something tangible, absolute music subsists in and for itself, without being in any way derived from concrete conditions or objects. Acoustic color. The timbre (character or quality) of a mus. tone.

Acoustics. (Ger. *Aku'stik* ; Fr. *acoustique* ; It. *acu'stica*.) The science of the properties and relations of sounds. §1. *Musical acoustics*, the science of mus. tones, distinguishes between tones and noises. A tone of sustained and equal pitch is generated by regular and constant vibrations of the air, these being generated by similar vibrations in the tone-producing body ; whereas a noise is caused by irregular and fluctuating vibrations. Briefly, "the sensation caused by a tone is produced by rapid periodic movements ; that caused by a noise, by imperiodic movements" (HELMHOLTZ). But a sonorous or tone-producing body vibrates not only as a whole, but in its various fractional parts as well. Take a pftc.-string, for instance ; when struck by the hammer it vibrates, not simply as a whole in its entire length, but each half, each $\frac{1}{3}$, $\frac{1}{4}$, $\frac{1}{5}$, etc., of the string vibrates by itself, as it were (comp. *Note*), and produces a tone of a pitch corresponding to its own length ; the *C*-string thus produces, besides the fundamental tone or generator, *C*, its octave *c* ($\frac{1}{2}$ of string), its twelfth *g* ($\frac{1}{3}$), fifteenth *e*¹ ($\frac{2}{5}$), seventeenth *e*¹ ($\frac{1}{3}$), nineteenth *g*¹ ($\frac{1}{6}$), etc. The points of rest in the string (or other tone-producing body) where such vibrating portions

meet, are called *nodes*, or *nodal points*; the tones produced by the vibrating divisions are called *harmonics*, or *overtones*; and the entire series, including the generator, are called *partial tones*,

being considered parts of the composite tone (clang) named after the generator. The series of partial tones may be given in notes as follows, numbered consecutively from *C* upward.

C: I — V — III (= major triad).
(Notes marked * are only approximately correct.)

The intensity of the harmonics ordinarily decreases rapidly as their pitch becomes higher.

§2. The harmonics are important in many ways. (a) Their presence in varying degrees of intensity produces the timbre peculiar to the several instr.s; thus the tone of the stopped diapason (organ), in which they are weak, is soft and "hollow"; the tone of an old violin, in which the lower harmonics are well-developed and evenly balanced, is mellow, round, and sonorous; that of the trumpet, in which the high dissonant harmonics also make themselves felt, is ringing, "metallic," and brilliant. (Compare *Scale*.)—(b) On bowed instr.s they yield an additional and highly characteristic register (see *Harmonic 2*).—(c) On wind-instr.s, from which they are obtained by varying the intensity and direction of the air-current, they are indispensable for extending and completing the natural scale; thus the bugle and French horn, which yield but one fundamental tone (without keys or valves), depend entirely on the harmonics for the production of their scale; the flute depends upon overblowing, which produces the harmonics of its tube, for its upper register; etc., etc.—(d) Musical theory owes highly important discoveries to the investigation of the harmonics, of which discoveries practical music in turn reaps the benefit (improved construction of many instr.s). (Comp. *Scale*.)

§3. By sounding two tones together, various phenomena are produced. (a) 2 tones of nearly the same pitch produce *beats*. E. g. if the one makes 442 vibrations per second and the other 440, the

difference, 2, represents the number of *beats* per second, a beat being the pulsation or throbbing caused by the coincidence of, and consequent momentary increase of the intensity in, the sound-waves of the two tones; this coincidence recurring regularly at every 221st vibration of the first tone and 220th vibration of the second.—(b) As soon as the number of beats per second amounts to about 32, the ear no longer distinguishes them as separate throbs, and they unite to form a very low tone ($32 \text{ v.} = C_2$), called a *combinational*, *summational*, or *resultant tone*; in fact, the various combinations of interfering vibrations produce, in their different combination, a series of harmonics, the lowest and chief among which is always the generator of the series to which the two original tones belong. Thus, according to Tartini, the interval $g-c^1$ produces the following series of resultant tones:

—(c) In the series of partials given in §1, those belonging to the major scale of the generator *C* are written as half-notes; the consonance of the **major triad** is derivable from and based upon the principal partial tones. In like manner, the consonance of the **minor triad** is derived from a *reverse* series of *lower partials*, the existence of which is proved by the phenomena of sympathetic vibration and of the resultant tones. In this series of *lower partials* (undertones),

c^3 — f^1 — a^7 (minor triad; c = phonic root [see *Phone*]).

the numerals also represent the relative length of the strings necessary to yield the several tones; while in the series of higher partials (overtones) the string-lengths are represented by the simple fractions formed by the numerals.—(d) From the relative number and importance (intensity) of the first 6 partials in either series, it follows, that the only *consonant chords* are the *major* and *minor triads*, and that the only *consonant intervals* are such as are derived from these chords or their inversions; the addition of any further tone, either found in or foreign to the series of partials, produces a *dissonance*.

Alphabetical notation. Any method of writing music which uses the letters of the alphabet.—The earliest known method was the ancient Greek, which employed two parallel series of letters, one for vocal and the other for instrumental music, the letters being variously inverted, accented, or mutilated to indicate the several octaves and chromatic tones. This method was retained, at least by theorists, down to the 10th century (see *Neumes*), when the beginnings of a new method appeared, employing the first 7 letters of the Latin alphabet *A B C D E F G* for the major diatonic scale now represented by *C D E F G A B*, and repeating the same series for the higher octaves. These Latin letters were at first used for instrumental notation (psalter or rocca, later the organ). Their signification was soon altered, however, to conform to that of the earlier Greek system (*minor*), the series then agreeing with our present one; the Greek Γ (*Gamma, G*) was added as the lowest tone, and the octaves above Γ were written *ABCDEF G abcdefg aabbccdd eeffgg* etc. (or $\begin{smallmatrix} a & b & c & d \\ a & b & c & d \end{smallmatrix}$ etc.); though sometimes, instead of small letters, the capitals ran on (*HIKLMNOP*), in which latter system *A* was equivalent to our modern *C*, as at first. Arbitrary innovations led to great confusion in the alphabetical notation, which was in reality rendered superfluous, as a method of writing music, by Guido d'Arezzo's invention or systematization (about 1026) of line-notation (see *Notation*). When letters were used, without staff-lines, instead of neumes, they were often written above the words in this wise:

E /	EE /	C	E /	E /	F
D	DD	/	D	/	
/	/	/	/	/	
Qui	tol	- lis	pec	- ca	- ta

i.e., in notes:

ascending or descending as the voice was to rise or fall.—Our present theoretical division of the octave is first found fully developed in the works of Praetorius (1619); side by side with which the old method of writing music (*A-G, a-g* etc.) still occurred, until the various systems of tablature were given up (comp. *Tablature*).—Letters are no longer used in practical mus. notation, except by Tonic Sol-fa, in which, however, they represent no fixed pitch, as formerly, but are mere abbreviations of the movable solmisation-syllables. In modern theory, letters are variously employed (comp. *Pitch, absolute*).

Ambrosian chant. The style of church-music introduced by St. Ambrose (d. 397) from the Eastern Church, and established by him in the cathedral at Milan, towards the end of the 4th century. It was based on the 4 authentic modes

and was thus essentially diatonic, although embellished with occasional chromatic graces; it was probably rhythmical, in contrast to the later de-

- velopment of Plain Chant. Nothing positive is known about these melodies, except that St. Ambrose introduced the antiphonal songs and hallelujahs of the Eastern Church, and himself composed numerous hymns. (Comp. *Gregorian Chant*.)

and part of the time-value of the latter.

(a) The *long appoggiatura*, now obsolete, often occurs in earlier music; it was, in point of fact, a *suspension* written as a small note in order to evade, as it were, the rule against the entrance of unprepared dissonances. The duration of the small note properly corresponds to its time-value if written as a large note; e. g.

written :

performed :

etc.

though cases may occur in which the appoggiatura takes more than its apparent value :

written :

performed :

or (acc. to TÜRK):

(b) The *short appoggiatura* is properly written as a small eighth-note or 16th-note with a slanting stroke through the hook; the general rule for its execution is, to perform it very swiftly, giving it the accent of its principal note, and a portion of the latter's time-value differing according to the speed of the movement somewhat as follows :

written :

performed :

(c) The *double appoggiatura* contains 2 or more small grace-notes (commonly written as 16th-notes) before a principal note; it is performed rapidly, its duration subtracted from the time-value of the principal note, with the accent on the first small note (compare *Anschlag*, *Slide*).—2. The *unaccented appoggiatura* (Ger. *Nachschlag*) is a rapid single or double grace-note following a principal note, from the time-value of which

its duration must be subtracted, and with which it is connected by a slur ;

performed :

A'ria (It.; Ger. *A'rie*.) Primarily, an air, or rhythmic melody.—As a technical term, an aria is an extended lyrical vocal solo in various forms, with instrumental accompaniment. With the rise of homophonic music in the opera and oratorio, the aria developed, from a mere plain-song melody with *basso continuo*, into the *aria gran'de* (the *grand* or *da-capo* aria in 3 divisions preceded by an instrumental *ritornello* containing the principal melody; division I being an elaborate development of a theme with frequent repetitions of the words; II, a more tranquil and richly harmonized section; followed by III, the repetition *da capo* of I, with still more florid ornamentation); the *aria di bravu'ra*, (similar to the foregoing, but overloaded with difficult passages and coloraturas for showing off the singer's skill); the *aria da chie'sa* (church-aria, differing from the sacred song chiefly in its greater breadth, and in being accompanied by full orchestra); and the *aria da concer'to* (concert-aria, differing from the others, which are portions of operas, oratorios etc., in being an independent composition intended for the concert-hall).—The modern aria is freer in form than the *aria grande* of the 18th century, the *ritornello* often being omitted, greater variety given to the *da capo*, and the thematic construction made to follow the sense of the words, so that it sometimes assumes the form of a rondo, or consists of 2 slow divisions separated by an allegro movement. . . *Aria parlan'te* (also *ario'so*), a vocal style combining the melody of an aria with the distinct enunciation of a recitative, the vowels being "thrown forward."—Smaller arias, nearly in song-form and with slighter accompaniments, are called *ariettas* or *cavatinas*.

a. calls for the following execution: i. e. the first arpeggio-note falls on the accent; this is the rule for the accent, tho' there are occasional exceptions.

(1.) indicates that the arpeggio is simultaneous in both hands; (2), that all the notes are to be played in succession from lowest to highest.—In earlier music (Bach, Händel) the same sign calls for a more or less free spreading of the chords, generally according to a preceding pattern-chord in which

the *a.* is written out in full. Obsolete or unusual signs are as follows:

a, b, c, d are equivalent to the modern sign; *e, f, g* call for a reversed (descending) arpeggio; *h* means either an ascending arpeggio, or a combined *a.* and *acciaccatura*; *i* and *k* signify a spreading in eighth-notes; the appoggiaturas at *l* and *m* delay the performance of the notes to which they are attached by the time required for playing a long or short appogg. respectively.

- Canon.** (Ger. *Kanon*; Fr. *canon*; It. *ca'none*.) 1. The strictest form of

mus. imitation, in which two or more parts take up in succession exactly the same subject.—The part taking the lead is called the *antecedent*, and the following part the *consequent*. Canons are now usually written out in full, but during the high tide of medieval counterpoint it was customary to write only the antecedent, and to mark the successive entrances of the other parts by signs or merely by mysterious superscriptions (*enigmatical canons*); the superscription was then called the *canon* (i. e. rule, direction), while the composition was called the *ful'ga* or *consequen'ta*.—According to the interval from the antecedent at which the consequent enters, the canon is called a *C. in unison* (the consequent taking the very same notes as the antecedent, but of course entering later); *C. at the octave* (the consequent entering an octave above or below); *C. at the fifth, fourth*, etc. The *c.* could also be varied, like the fugue, by the diminution or augmentation of the theme, by inversion or retrogression, etc. (Comp. *Fugue*.) When the parts entered at the time-interval of a minim one after the other, the canon was called a *fuga ad minimam*.—2. Ancient Greek name for the Monochord.

But *cantata* has come, like *sonata*, to mean a definite form of composition, with the difference, that all earlier forms once called *cantate* must still be taken into account in defining the word *cantata*, whereas no one would now think of calling a short and simple prelude a *sonata*.—In modern usage, a *cantata* is a more or less extended vocal work with instrumental accomp., consisting of chorus and solos, recitative, duets, etc.; distinguished from the oratorio and opera by the exclusion of scenic effects and the epic and dramatic element; though the latter can, of course, not be entirely excluded, as even the purest lyrical emotion may often be intensified to dramatic pathos.—In the *sacred cantata* this form of composition finds its finest and most unequivocal expression.

Character, individual, of the several keys.—Theoretically, each major or minor key is precisely like every other major or minor key, the intervals in all being precisely similar. Practically, there subsist recognized differences, due (1) to the system of equal temperament as applied to instruments with keyboard or frets, and (2) to a more or less perceptible tendency towards "forcing up" the sharp keys (thus lending them a brighter and intenser character), and towards "letting down" or relax-

ing the flat keys (rendering them darker or, as it were, lending them a minor character). Theoreticians seem disposed to deny *in toto* the possibility of characteristic differences; while many highly cultivated practical musicians (not to speak of æsthetic enthusiasts of all stripes) are equally positive that such differences exist.

Chiavette, or Chiavi trasporta'ti (It., "transposed clefs.") A system of transposing clefs, freely used in the 16th century. As it was then a rule, but seldom infringed, that no vocal part should overstep the limits of the 5-line staff, and the modern system of chromatic transposition being undeveloped, composers often employed, in the notation of the various parts, clefs differing from those customarily used for the several voices, these unusual clefs indicating to the practised singers a transposition of their respective parts to a higher or lower pitch:

1. High *chiavette*.

Discant. Alto. Tenor. Bass.

2. Ordinary clefs.

3. Low *chiavette*.

The *high chiavette* had the effect of transposing the parts (and consequently the entire composition) into a key a major or minor third higher, i. e. their effect was equivalent to writing 3 flats or 4 sharps in a signature headed by the ordinary clef; the *low chiavette* had a precisely opposite effect, as if 3 sharps or 4 flats had been written after the ordinary clef.—Though not recognized as such, this system was tantamount to a pretty free use of the transposing scales.

Simplified later by Kalkbrenner.—Termed by Liszt "ass's guide" (*guide-âne*) for the French "hand-guide" (*guide-main*).

Chord. 1. (Ger. *Akkord'*; Fr. *accord*; It. *acco'rdo*.) In a general sense, the harmony of 2 or more tones of different pitch produced simultaneously.—As a technical term, a combination of from 3 to 5 different tones, formed by erecting, upon a fundamental tone or root, an ascending series of diatonic thirds. A 3-tone chord is called a *triad*, a 4-tone chord a *chord of the 7th*, and a 5-tone chord a *chord of the 9th*. The term *chord* is often applied specifically to the triads, as *major chord*, *minor*

chord, fundamental chord, etc.—A View of the fundamental diatonic chords follows, with the ordinary figuring in thorough-bass and theory :

Triads in Major.

C: I II III IV V VI VII°

Triads in Minor.

c: I II° III' IV V VI VII°

Chords of the Seventh in Major.

C: I₇ II₇ III₇ IV₇ V₇ VI₇ VII₇°

Chords of the Seventh in Minor.

c: I₇ II₇° III₇' IV₇ V₇ VI₇ VII₇°

Chords of the Ninth :

in major : in minor :

etc.

When the root of a chord is the lowest tone, the chord is said to be in the *fundamental position*; when some other tone is the lowest, the chord is *inverted*. Each triad has 2 *inversions*, and each chord of the 7th has 3. The inversions are limited neither to the given number of tones, nor to any particular order of the intervals above the bass; e. g. a chord of the sixth may be written

C: I I I I I I I

that is, it remains a chord of the *sixth* so long as the *third* of the triad remains the *lowest tone*, above which the (octave of the) *root* forms the interval of a

sixth. The **Arabic numerals** over the bass form what is called *thorough-bass* figuring; each figure marks the interval of some tone above the bass (or lowest tone), the order of the figures depending, not upon the order of the notes, but upon the width of the intervals, the widest interval always being written at the top. The simple figures invariably call for the diatonic intervals as established by the key-signature. O calls for *tasto solo* (see *Tasto*); 2 or $\frac{2}{2}$ or $\frac{6}{4}$, for the chord of the second (in full, chord of the second, fourth and sixth); 3 or $\frac{3}{3}$ or $\frac{8}{3}$, (α) for the simple triad, (β) 3 alone over the first bass note signifies that the soprano takes the third of the root; $\frac{4}{3}$ or $\frac{6}{3}$ calls for the chord of the third and fourth (and sixth); 5, for the fifth in the soprano; $\frac{5}{3}$, for the simple triad; 6, for the chord of the sixth; $\frac{6}{4}$, for the chord of the fourth and sixth; $\frac{6}{5}$, or $\frac{6}{3}$, for that of the fifth and sixth; 7 ($\frac{7}{3}$), for the chord of the seventh; 8, for the octave in the soprano, $\frac{8}{3}$, for the simple triad; 9, ($\frac{9}{3}$ or $\frac{9}{8}$, according as the fifth or seventh is dropped), for the chord of the ninth. $\frac{10}{8}$ $\frac{11}{9}$ $\frac{11}{10}$ were formerly used to show that the tenth and octave, eleventh and ninth, etc. of the bass note were to be taken instead of the third and prime, fourth and second, etc. Where there is a choice, the simpler figuring is preferable, unless some interval is chromatically altered. A \sharp , \flat , \natural , \times , or \flat alone over a bass note signifies that the *third* in the chord is correspondingly altered chromatically. A crossed figure ($\frac{2}{\times}$, $\frac{3}{\times}$, etc.) indicates that the interval is sharpened. A dash (-) after a figure prolongs the tone into the next chord.—The **Roman numerals** under the bass form no part of the thorough-bass figuring; they indicate on what degree of the scale the given chord (i. e. the *root* of the chord) has its seat, the key or scale itself being marked by a capital letter for major and a small letter for minor. A large numeral indicates a triad with major third; a small numeral, a triad with minor third; with an accent (III'), the augmented fifth; with a cipher (VII°), the diminished fifth; with a 7 (V₇), the chord of the seventh. [This is the system generally accepted; its prime defect (clumsiness in following chro-

matic alterations, and consequent inability to cope with the exigencies of free tonality) is felt by all theorists; *Jadassohn* solves the problem empirically by stretching his highly elastic theory of altered chords to the utmost;—e. g. he writes $C:IV$ (= $f\sharp-a\flat-c$ as the major triad on the 4th degree of *C*-major!)—*Riemann*, on the other hand, has devised an entirely new system, explained under art. *Phone*.] (Also comp. *Thorough-bass*.)

Altered chord, a chord chromatically changed, but not effecting a modulation; the commonest *altered chords* are the triads on the 1st, 2nd, 4th and 5th degrees in major and on the 4th and 6th degrees in minor (with altered fifth); on the 2nd degree in major and 6th in minor (with altered root); the chords of the 7th on the same degrees, excepting the 6th in minor (with altered fifth), and on the 7th degree in major and 2nd in minor (with altered root)... *Anomalous ch.*, see *Anomaly*... *Augmented ch.*, one having major third and augm. fifth... *Broken ch.*, an arpeggio... *Chromatic ch.*, one chromatically altered... *Common ch.*, a triad peculiar to any given scale... *Derivative ch.*, one derived by inversion from another... *Diatonic ch.*, a common chord... *Diminished ch.*, one having both 5th and 7th diminished... *Dominant ch.*, (a) the dom. triad, (b) the dom. ch. of the 7th... *Doubtful or Equivocal ch.*, a dissonant chord of uncertain resolution, like that of the dimin. 7th, which belongs to various keys, and may resolve to any one of them... *Fundamental chord*, (a) one in the fundamental position, i. e. with the root lowest; (b) the tonic triad; (c) one of the 3 principal triads of a key (tonic, dominant, and subdominant); (d) a common chord... *Imperfect or incomplete ch.*, a chord, one of whose tones is omitted... *Inverted ch.*, see *Inversion*... *Leading ch.*, the dominant ch. of the 7th... *Major, minor ch.*, see *Major, Minor*... *Related or relative ch.*, see *Relation*... *Seventh-chord*, ch. of the 7th... *Solid ch.*, one whose tones are produced simultaneously; opp. to *broken*... *Transient ch.*, one used in modulating from one key to another, and foreign to both.—2. (See *Semitone*). . . *Chromatic signs*, the characters used in mus. notation for raising or lowering the pitch of (a) natural notes, (b) notes already raised or lowered (comp. Table, art. *Interval*). Those now in use are the *Sharp* (\sharp), *Flat* (\flat), *Natural* (\natural), *Double-sharp* (\times), *Double-flat* ($\flat\flat$); the *Great Flat* ($\flat\flat$) is obsolete; the combined sign $\sharp\flat$ (or $\flat\sharp$) signifies that a note previously sharped (or flatted) is first restored to its natural pitch on the staff and then sharped (or flatted); the *Double-natural* ($\natural\natural$) is superfluous and incorrect.—The chromatic signs at the head of the staff are called the *key-signature* (see *Key* 1); such as occur irregularly in the course of a composition are called *accidentals*. An accidental, as a general rule, affects its note only during the measure in which it is written, unless the note be tied into the next measure or measures:

higher or lower octaves of the note are not affected, and must therefore likewise take an accidental.

Clarín (Fr.) See *Clarion*.

Clarinet. 1. (Ger. *Klarinet'te*; Fr. *clarinette*; It. *clarinet'to*.) The parent instr. of the clarinet family was the chalumeau, a primitive wind-instr. having a cylindrical tube with 9 finger-

holes, and a beating reed; its entire scale

was composed of the prime tones produced by successively opening the holes.—The modern clarinet differs from the chalumeau chiefly in its ability to reproduce the prime tones of its scale (or rather their third partials) *a twelfth higher*; this result is due to the addition of a small hole, covered by an extra key, at the nodal point dividing the air-column into 3 equal portions,—an improvement attributed to Joh. Chr. Denner of Nuremberg about 1700. The higher scale or register thus obtained was termed, by reason of its bright and piercing quality, *clarinetto* (whence the name of the modern instr.); the original lower scale retained the name of the old chalumeau.—The soprano clarinet in *C* is the typical instr. of the family; compass 3 octaves and a sixth (with chromatic intermediate tones):

It has a cylindrical wooden tube pierced by 18 holes, 13 of which are closed by keys, yielding a chromatic series of 19 prime tones (e to $b^1\flat$); it is composed of 5 pieces or joints, namely, the *mouthpiece* with the reed, the *socket* (Ger. *Birne*), the "right-hand" and "left-hand" joints of the tube proper, and the *bell*; its higher registers are simply the third, and fifth or ninth, partials of the prime tones (from $b^1\flat$ to f^3 , and $f^3\sharp$ to c^4). The quality of the tone differs greatly in the four registers, the "chalumeau" and "clarinetto" being comparable to the female contralto and soprano respectively, while the medium is weak and veiled, and the highest shrill and piercing. Several sizes are made: (1) The *large soprano cl.* in *C*, $B\flat$, and *A*, and (2) the *small soprano clarinets* in *D*, *E*, *F* and *A*, these last being mostly used in military music, in which their position is similar to that held by the violins in the orchestra. There are also *alto* (or *barytone*) clarinets in *F* and $E\flat$, and *bass clarinets* in *C*, $B\flat$, or *A* (octave below

the soprano instr.s of the symphony-orchestra). The *cl.* is a transposing instr., and its music is written in the *C*-clef. The fingering is very complicated and the reed difficult to manage, a slight error of judgment sufficing to produce the fatal "couac."—2. See *Clarinet* 2.

Clarinet-stop. See *Krumm'horn*.

Clarinet'to (It.) See *Clarinet*.

Clari'no (It.) 1. Clarion 1 and 2.—2. A name loosely applied to the trumpet and bugle.—3. Used for *tromba*, in some old scores.

Classic. In a restricted sense, a composition is called classic when it belongs to an acknowledged style in art, and is by an acknowledged master of

that style.—In a broader sense, any composition may be termed classic which, in its kind, might be taken as a model for imitation, and in which the form is in perfect harmony with the spirit or subject-matter.—*Classic* is also often used as a distinctive epithet for the works of the earlier masters, including Beethoven, and their imitators, in contrast to those of the *romantic* school; *classic forms* being the aria, rondo, sonata, symphony, etc.

The 3 now in use are the *F*-clef, *C*-clef, and *G*-clef; the *F*-clef and *G*-clef are also called the *Bass*-clef and *Treble*-clef respectively, because they fix the position of the bass and treble notes. The *C*-clef is variously called the *Tenor*-, *Alto*-, and *Soprano*-clef, according as it is set on the 4th, 3d, or 1st line of the staff; wherever placed, it marks the position of Middle-*C* (*Tenor-C*.) In equal counterpoint it is apt to occur at a modulation, and consists in sounding, either simultaneously or successively, a tone and its chromatically altered octave. The former case is generally confined to passing-notes in figuration, and then has no ill effect; the latter case occurs when a chromatically changed tone, which might have been reached in one part by the step of a chromatic semitone, enters in another octave in another part; the effect is harshest in passing from a major chord to a parallel minor chord, or vice versa:

Compass from c^1 to c^4 (rare extremes b and $c^{\sharp 5}$):

the first octave is obtained by moderate

wind-pressure, the second and third by augmenting and forcing it, thus causing the tone to change (by overblowing) to the higher octave. It is a non-transposing instr., and its music is therefore written at the pitch at which it is to be played. Together with the *octave-flute* or *piccolo* it forms an incomplete family, made in 6 sizes:

Flute	{ in C	Piccolo	{ in C
	{ in D \flat		{ in D \flat
	{ in E \flat		{ in E \flat

the typical member of which is the *C-flute*. Its powerful and mellow tone (more reedy than that of the old flute), and extraordinary flexibility and agility, render it the leader of the wood-wind.—The *piccolos* in D \flat and E \flat are chiefly used in military music.—In the 15th and 16th centuries complete families of flutes were constructed, embracing bass, alto, and treble instr.s.—2. *Direct Flute*, the flageolet and *flûte à bec*, having a *mouthpiece* at the end.

(Ger. *Stiefel*.) That part of an organ-pipe below the mouth.—3. (Obs.) A drone-bass; a refrain or burden.—4. The unit of measure in designating the pitch of organ-stops, and (by extension) that of other instr.s, and of the several octaves of the mus. scale; thus an 8-foot (8') stop is one whose longest pipe produces the  and is about 8 feet in length, i.e. a tone C:  stop whose pipes produce tones corresponding in pitch to the keys depressed; a 4-foot (4') stop is an octave-stop; a 16-foot (16') stop yields tones an octave below those indicated by the keys  touched. The 8-foot octave  embraces the 7 tones from C  upwards (comp. *Pitch*, §1); the flute is an 8-foot instr. (because the pitch of its tones is the same as that indi-

cated by the notes), while the piccolo is a 4-foot (or octave-) instr.—The derivation of the term is as follows: The velocity of sound-waves is estimated at 1056 feet per second; by dividing this velocity by the vibration-number of the given tone, we obtain the length of one sound-wave of that tone; for instance, the tone C₂ having 33 vibrations per second, $1056 \div 33 = 32$ feet, the length of one sound-wave, and likewise the length of an open flue-pipe capable of producing the tone C₂ (C_{CC}).

Form. Form in music is that element, or combination of elements, which, by securing a *proper balance* between contrasting parts, produces *finish of effect*, or *Unity*. What are called the musical forms depend, in varying degree, for their distinctive features, (1) on rhythmic and metrical grouping; (2) on thematic construction; (3) on melodic and harmonic contrast; (4) on contrasting tempi; and (5) on contrasting moods. Points 1 and 2 cover the ground of (I) *mechanical symmetry*; the contrasts of melody, harmony, tempo, and mood postulate a more highly developed sense for (II) *aesthetic symmetry*.

I. (1.) The element of metrical grouping is eminently characteristic of ordinary dance-airs and simple songs; the following example exhibits its simplest form:

Period.

Period.

Analysis of this *Sentence* (compound *period*, here a period of 16 measures), which contains a musical thought complete in itself, shows it to be composed of 2 simple 8-measure *Periods*, each period being formed by 2 *Phrases*, each

of which embraces 2 *Sections* formed, in turn, of 2 *Measures* each. [The term *motive* for measure is to be rejected as misleading and unnecessarily confusing, except in the qualified shape of *measure-motive*.] The *punctuation* of such a

musical sentence presents a striking analogy to that of the grammatical sentence from which its terminology is in part borrowed: Phrase 1=subject and predicate [comma], Phrase 2=limiting clause [semicolon], Phrase 3, further modification [comma], Phrase 4, second limiting clause and conclusion of sentence [period]. The exact symmetrical balance here observable, of 2+2, 4+4, and 8+8, though of very common occurrence, is not the general rule, and would engender wearisome monotony (especially in extended compositions) if regularly adhered to; the variety of changes caused by triple time, compound measures, the opposition of unequal phrases, the expansion or contraction of periods, etc., etc., is practically limitless. But in all the musical forms in which metrical symmetry is observed, the simple period is, in one shape or another, the *form-element* or *germ-cell*, so to speak, on which their construction is founded.

I. (2.) A theme or melody simply repeated, (formula $A+A$, or $|: A :|$), presents no distinctive departure from the simplest form; repeated in alternation with another $|: A+B :|$ it ex-

II. (1.) The element of harmonic contrast is derived in part from contrasting themes, in part from the deliberate choice of keys directly or remotely related to that of the leading theme; in part, also, from the harmonies accompanying or varying the theme or themes. Dependence on the harmonic variation of repetitions of a single theme, together with the light and shade of varying tempi, is an important principle of the *Theme with Variations*.

II. (2.) In cyclic compositions (the *Cyclical Forms*), contrasting tempi (S =slow, F =fast) in the successive movements are a prominent feature. The old *Suite* originally had the formula ($S + F + S + F$); later a fifth movement, either slow or fast, was inserted after (seldom before) the 2nd slow one. The *Sonata* and *Symphony* are essentially alike in plan; either ($F + S + F$), or more commonly ($F + S + F + F$), or ($S + F + S + F$), or ($F + F$

hibits the peculiar feature of the *song with refrain*; once repeated, after any digression (interlude, or second theme), it produces the so-called *Song-form* (*Lied-form*, $A+B+A$), or that of the *Minuet with Alternativo*. With 2 distinct themes alternating as follows: ($|: A + B :| + B [A] + A + B$ [in the original key of A]), it has the *Sonata-form*, or *First-movement Form*; while the *Rondo-form* has the following alternations: ($A + B + B [A] + A + B [B_2$ in same key as A ; development-section in the middle]); or: ($A + B + A$ [in same key as B] + B [same key as A] + A). It must be added, however, that the *Song-form*, *Sonata-form*, and *Rondo-form*, as carried out in practice, present frequent deviations from the above formulas.—A theme repeated or imitated while still progressing, produces the form of the *Canon*, *Catch* or *Round*; one or more themes repeated in conjunction or alternation with an accompanying or contrasting counterpoint, according to a more or less regular formula, the *Fugue*. The following is a fairly exhaustive formula for the construction of a simple 2-part fugue:

+ $S + F$); or, in 5 movements, ($F + S + F + S + F$); etc.; a *slow closing movement* rarely occurs.

II. (3.) The foregoing formal schemes are a product of the slow evolution of centuries. First, the primitive dance-song develops into lyric and epic song—love-ditties, ballads,—and into instrumental dance-tunes differently named according to their character or origin; while a parallel progress is seen in the rise of church-music from the severe Gregorian Chant to the stupendous contrapuntal works of the late middle ages and the chaste style of Palestrina. Instrumental art-music now borrows and develops its forms from the vocal style; the forms of imitative music (canon and fugue) gradually near perfection, finally attained by J. S. Bach; through the adoption by artists of the *rhythmic melody* and *monodic style* of the hitherto despised *natural music* (folk-music), and the *recognition of its harmonic*

- basis*, the two currents of art-music and folk-music are slowly merged in one broad stream; the popular dance-tunes are transformed into art-forms, and combined in the Suite; the rondo-form and the first-movement (sonata-) form are evolved step by step, and their combination produces the Sonata and Symphony; which latter, discarding the scheme of 4 formal movements, and aspiring to the uninterrupted flow and sweep of an epico-lyrical drama without words, becomes the Symphonic Poem. Fugue. (Ger. *Fu'ge*; Fr. *fugue*; It. *fu'ga*.) The most highly developed form of contrapuntal imitation, based on the principle of the equality of the parts, a theme proposed by one part being taken up successively by all participating parts, thus bringing each in turn into special prominence. The word fugue is presumably derived from the Latin *fuga*, a flight, which aptly characterizes the chasing and changing of the subject through the several parts.

The elements essential to every fugue are (1) *Subject*, (2) *Answer*, (3) *Countersubject*, (4) *Stretto*; to these are commonly added (5) *Episode*, (6) *Organ-point*, (7) *Coda*; the (8) *Codetta* is merely a fortuitous appendage to the actual subject, bridging over the interval sometimes left between the true end of the latter and the entrance of the *Answer*.—The *subject* is usually short and suggestive; after its proposition by the part taking the lead, it is taken up by the part next following as the *answer*, and at a different interval (usually a fifth higher or a fourth lower than the original one), being then accompanied by a contrast-

ing counterpoint, the *countersubject*, in the first part; if there are 3 parts, the 3rd resumes the subject at the octave of its original pitch, followed (if there are 4 parts) by the answer in the 4th. This first enunciation of the subject by all the parts in turn, with contrapuntal accomp. in the rest, is called the *Exposition*; this is commonly succeeded by an *Episode*, which is generally constructed (for the preservation of unity of effect) of motives from the subject and countersubject, with modulation into related keys; then comes the *First Development*, or *Repercussion*, in which subject and answer are taken up by the several parts in a different order, followed by a second and variously modified episode. Further developments and episodes follow at the composer's pleasure, varied by the contrapuntal devices enumerated above, and generally in freer form, the subject and answer appearing in new keys and at a different interval. The fugue may be concluded by a *Stretto* or *Final Development*, in which the subject and answer overlap each other in consequence of following in closer succession; the stretto is frequently above an *organ-point*; or the organ-point is used to support the freer contrapuntal combinations of the *coda*, a general finale or winding-up; or stretto and coda are identical; etc., etc.—The modern fugue has 2 principal varieties: (1) The *Real Fugue*, in which the original form of the subject is preserved in the answer (i. e. the latter is an exact transposition of the former); and (2) the *Tonal Fugue*, in which the subject is modified in the answer in order to return to the original key; e. g.

Subject.	Answer (Tonal).	Not: x
		

Further varieties are the *Double Fugue* (with 2 subjects, the exposition of the 1st being followed by that of the 2nd, and finally by the combination of both); —the *Triple Fugue* (with 3 subjects); etc.; a fugue with 2 or more subjects is sometimes called a *Manifold Fugue*.—A fugue in which the countersubject is retained and developed together with the subject throughout, is also called a double fugue. The most elaborate fugal form is the *Fuga ricercata* (comp.

Fuga).—Fugues may be written for voices or instr.s, or for solo instr.s (pft.e., organ). (Compare *Form I*, 2.)

Greek music. Without attempting to explain the theoretical and mathematical subtleties of the system, a brief statement of some leading features will be given below.

§1. **The Modes, or Octave-scales.**

The typical Greek scale was precisely

<p>1. Dorian.</p> <p>e¹-d¹-c¹-b-a-g-f-e</p>	<p>2. Phrygian.</p> <p>d¹-c¹-b-a-g-f-e-d</p>	<p>3. Lydian.</p> <p>c¹-b-a-g-f-e-d-c</p>
<p>4. Hypodorian or Æolian.</p> <p>a-g-f-e-d-c-B-A</p>	<p>5. Hypophrygian or Ionian.</p> <p>g¹-f¹-e¹-d¹-c¹-b-a-g</p>	<p>6. Hypolydian.</p> <p>f¹-e¹-d¹-c¹-b-a-g-f</p>
<p>7. Hyperdorian or Mixolydian.</p> <p>b-a-g-f-e-d-c-B</p>	<p>8. Hyperphrygian or Locrian.</p> <p>a¹-g¹-f¹-e¹-d¹-c¹-b-a</p>	<p>9. Hyperlydian.</p> <p>g¹-f¹-e¹-d¹-c¹-b-a-g</p>

(The signs — and ~ indicate the step of a whole tone and semitone respectively.)

The prefix *hypo* signifies "a fifth below"; *hyper*, "a fifth above". (Compare *Mode*.) The character and name of each mode depended (a) upon the form of the tetrachord, and (b) upon the position of the *diazœutic tone*. While each of the 3 primitive modes is composed of 2 tetrachords of like name and form, which are *disjoined* (separated) by the diazœutic tone (marked †; from *diazœuxis*, a separation), each of its 2 attend-

the reverse of our modern *ascending major scale*, being conceived as a *descending minor scale*. Harmony in the modern sense was unknown; the aim of Greek theory in treating of harmonic intervals was, therefore, to establish the melodic succession of the tones, and the Greeks conceived the scale as constituted of a series of *tetrachords* (4-tone groups with the compass of a perfect fourth).

The primitive Greek modes were simple octave-scales; the three most ancient forms were (1) the Dorian, (2) the Phrygian, and (3) the Lydian, to each of which were later added 2 attendant modes, making 9 in all:

ant modes is composed of 2 similar *conjoined* tetrachords, united by one common tone, and preceded or followed by the *diazœuxis*. The character of the tetrachord depends on the position of the semitone; e. g. in the Dorian tetrachord, found in the Dorian and attendant modes, the semitone occurs between the third and fourth tones. This Dorian mode is an exact inversion of the modern major mode:

Major Mode.	Dorian Mode.

§2. **The Perfect System** is based on the Dorian tetrachord; it comprises the

following two octaves, in which the Dorian mode occupies the central portion:

<p>Tetrachordon hyperbolean (highest tetrachord).</p>	<p>Tetrachordon diezeugmenon (disjoined tetrachord).</p>	<p>Tetrachordon meson (middle tetrachord).</p>	<p>Tetrachordon hypaton (lowest tetrachord).</p>	<p>Proslabano- menos (acquired tone).</p>
<p>a¹-g¹-f¹-e¹-d¹-c¹-b-a † a-g-f-e-d-c-B-A</p>				
<p></p>				
<p>Dorian Mode.</p>				

This system is formed by adding, at either extreme of the Dorian scale, a conjoined tetrachord, and completing the 2-octave system by the addition of *A* (hence called *Proslambanomenos*, "the acquired tone") in the lower octave, thus forming a complete a-minor descending scale. The 2 central tetrachords were therefore disjoined; but, for modulations to the *lower quint*

(which to the Greeks was the most natural transition, just as that to the key of the *higher quint* is to us), they used the semitone above the highest tone of the middle tetrachord, and consequently distinguished a special "conjoined tetrachord" (*tetrachordon synemmenon*) $d^1-c^1-b\flat-a$, in opposition to the "disjoined tetrachord" (*tetr. diezeugmenon*) d^1-c^1-b-a .

The theorists attributed special importance to the middle tone *Mese*, as the tonic of the perfect system. This system also forms the foundation of medieval mus. theory; even the compass given above was not overstepped till the introduction of the Γ (gamma). Gregorian music keeps within these limits, and the notation in Latin letters retains this same diatonic scale even to the chromatic alteration of *Paramese* to *Trite synemmenon*. This perfect system (*systema teleion*) was also styled the *systema metabolon*, the "mutable (i. e. modulatory) system," with reference to the modulation to the subdominant made possible by employing the conjoined tetrachord; without this tetrachord it was called the *systema ametabolon* (immutable). [This diatonic division of the tetrachord into 2 whole tones and a semitone (as $a-g-f-e$), of which the Dorian tetrachord is the normal type, was the distinctive feature of the diatonic genus (genus=melodic arrangement of the tones within the tetrachord); the earlier enharmonic genus was formed by omitting the *paranete* or the *lichanos* (as $a-g-f-e$), and the later

enharmonic genus by dividing the *trite* or the *parhypate* into 2 tones (as $a-f-e$); while the *chromatic genus*, also omitting the diatonic second degree, was expressed by sharpening either *trite* or *parhypate* (as $a-f\sharp-e$); etc.]

§3. **Transposing Scales.** While the perfect system remained the standard in theory, the progress of Grecian musical art widened its application in practice until all flat and sharp semitones were employed, and its range likewise extended. The chromatic alterations were expressed in the Greek alphabetical notation by different letters and different positions of the same letter, which were equivalent in effect to our \sharp and \flat . E. g., on substituting in the octave-scale d^1-d the conjoined for the disjoined tetrachord (i. e. $b\flat$ for b), this octave-scale is no longer the Phrygian, but becomes the Hypodorian, for the distinction between the modes depends on the position of the semitonic step; moreover, as the Hypodorian octave-scale is to be considered as that extending from the Dorian *mese* to *proslambanomenos*, this octave-scale d^1-d

with $b\eta$ belongs to a transposed Dorian mode, having not A , but d , for *proslambanomenos*. Greek music was not tied, like the Gregorian, to the diatonic scale $A—a^1$ without chromatics, but employed transpositions of the perfect 2-octave system parallel to our 12 or more sharp and flat keys; finally, these transpositions numbered 15 in all, those first in vogue bearing the same names as the first 7 octave-scales. In the Greek method of alphabetical notation, the *natural* scale (without chromatics) was the Hypolydian:

$$f^1 \sim e^1 \sim d^1 \sim c^1 \sim b \sim a \sim g \sim f \quad \uparrow$$

consequently, the 2-octave system $A—a^1$ without chromatics is called the Hypolydian (being the *natural* scale among the transposing scales, as is C -major among the sharp and flat keys), and the transposing scales are named according to the mode represented by the various chromatic alterations of the octave-scale $f^1—f$. For instance,

$$f^1 \sim e^1 \sim d^1 \sim c^1 \sim b\eta \sim a \sim g \sim f \quad \uparrow$$

being a Lydian octave, the 2-octave system (or transposing scale) $d—d^2$ with one flat is called the Lydian transposing scale. It follows, that the octave $f^1—f$ belongs

without \sharp or \flat to the system $A—a^1$

(Hypolydian)

with 1 \flat to the system $d—d^2$

(Lydian)

“ 2 \flat “ “ “ $G—G^1$

(Hypophrygian)

“ 3 \flat “ “ “ $c—c^2$

(Phrygian)

“ 4 \flat “ “ “ $F—f^1$

(Hypodorian)

“ 5 \flat “ “ “ $b\eta—b^2\eta$

(Dorian)

“ 6 \flat “ “ “ $e\eta—e^2\eta$

(Mixolydian, or Hyperdorian)

On the other hand, all the sharp scales (of later origin) show new names; the octave $f^1\sharp—f^2\sharp$ belongs

with 1 \sharp to the system $e—e^2$ (Hyperastian)

(high Mixolydian)

“ 2 \sharp “ “ “ $B—b^1$ (Iastian)

(high Dorian)

“ 3 \sharp “ “ “ $F\sharp—f^1\sharp$ (Hypoiastian)

(high Hypodorian)

“ 4 \sharp “ “ “ $c\sharp—c^2\sharp$ (Æolian)

(high Phrygian)

“ 5 \sharp “ “ “ $G\sharp—g^1\sharp$ (Hypoæolian)

(high Hypophrygian)

“ 6 \sharp “ “ “ $d\sharp—d^2\sharp$ (Hyperdorian)

(high Lydian)

The system $d^2\sharp—d^3\sharp$, with 6 sharps, is enharmonically identical with $e\flat—e^2\flat$ with 6 flats; both are named Hyperdorian; here closes the circle of fifths. —The names of the sharp scales re-emerge as those of church-modes (the number of which was increased to 12 in the 16th century); namely, the Ionian (= Iastian), and Hypoionian, Æolian, and Hypoæolian.

Gregorian chant. The forms of music worship as revised and established by Pope Gregory I. (the Great, d. 604) for the R. C. Church, and known collectively under the name of Plain Chant. There was probably no essential difference between the Gregorian and Ambrosian styles; St. Gregory's chief work was the careful revision of the ritual music employed at his time, the rejection of redundances and abuses, and the final establishment of the material thus sifted and arranged as the norm for all Western Churches. He was also presumably the arranger, if not the originator, of the 4 Plagal modes parallel to the 4 Authentic modes of St. Ambrose. (See *Mod.*)

Guidon (Fr.) A direct.

Guido'nian hand. The Guidonian Hand was a diagram, for memorizing the solmisation-syllables of the 20-tone diatonic scale (T to ee), in the shape of an outstretched left hand with the syllables written in regular order on the successive finger-tips and joints. The syllables were called the *Aretinian* or *Guidonian syllables*. (See *Solmisation*.)

Guimbard. (Fr. *guimbarde*.) A jew's-harp.

Guitar'. (Span. *guitar'ra*; Ger. *Guitar're*; Fr. *guitare*; It. *chitar'ra*.) An instr. of the lute family. The modern ("Spanish") guitar has six strings, the 3 highest of gut, the 3 lowest of silk covered with fine silver wire, tuned *E-A-d-g-b-e¹*;

(or *E-B-e-g[#]-b-e¹*); but guitar-music is written an octave higher, in the *G*-clef. The pitch of all 6 strings can be raised a semitone by using the capotasto.

Compass (with the 3 octaves harmonics, and a fourth: an octave more).

The long fingerboard is furnished with frets on which the strings are stopped with the left hand, while the right plucks the strings with the fingertips (the thumb taking the 3 lowest, the forefinger *g*, the middle finger *b*, and the ring-finger high *e*), or strikes them with the back of the fingers ; the thumb also sweeps the strings with the arpeggio-effect called the *rascado*.—The body of the guitar has a broad waist, no corners, and a flat face and back. It is used as a solo instr., and in accompanying songs.

Harmonic. 2 (*noun*). (a) (Ger. *O'berton*; Fr. *son harmonique*; It. *suono armonico*.) One of the series of tones sounding with, but higher in pitch and less intense than, its generator (see *Acoustics*).—(b) (Ger. *Flageolet-ton*, *Harmo'nikaton*; Fr. *son harmonique*; It. *suono armonico*.) A tone obtained, on any stringed instr. which is stopped (violin, guitar, zither, etc.), and also on the harp, by lightly touching with the finger-tip a nodal point of a string; the string, when set in vibration, can then not vibrate as a whole, but only in independent sections, each section corresponding in length to the division of the string cut off by the finger, and each producing one and the same tone—the *harmonic*. Thus,

by lightly touching the *G*-string of a violin at its midpoint, it is divided into 2 vibrating sections, each producing the octave of *g*, i. e., g^1 ; by touching it one-third of the distance from nut to bridge, it is divided into 3 vibrating sections, each producing the fifth above the octave of *g*, i. e., d^2 ; etc. Such harmonics, obtained from open strings, are called *natural*; when the string is previously shortened by stopping, and the harmonics then obtained by lightly touching this shortened section, they are called *artificial*. The following table shows the harmonics obtained on a string: By lightly touching

the octave,	we get the octave;
" fifth,	" " twelfth;
" fourth,	" " fifteenth;
" third (maj.)	" " its own 15th;
" third (min.)	" " 17th.

The harmonics are distinguished by their soft, sweet, ethereal character, and the "fluty" quality of their tone (hence the epithets *flautato*, *flageolet*). They are called for by the sign ° (the "harmonic mark") over the notes to be touched (*not stopped*).

Harmon'ica. (Comp. Ger. *Harmo'nika*.)

1. The instr. developed by Benjamin Franklin from the musical glasses, and named by him *Armon'ica*. It consisted of a graduated series of glass bells or basins forming a diatonic scale (lowest tone to the left), and fastened in a row upon a spindle, which was made to revolve by a treadle; the ends of the spindle were supported by the end-pieces of a trough containing water to moisten the revolving glasses, whose edges were touched by the fingers in playing. Melodies could be performed, and accompanied harmonically by chords as wide as the fingers could stretch.—2. See *Mouth-harmonica*.

Harp. (Ger. *Har'fe*; Fr. *harpe*; It. *arpa*.) A stringed instr. of ancient origin and wide dissemination, played by plucking the strings with the fingers and thumbs of both hands.—The modern orchestral harp (Erard's double-action harp) has a nearly 3-cornered wooden *frame*, the apex or *foot* of which is formed by an upright *pillar* meeting the hollow *back* (the upper side of which bears the *soundboard*) in the *pedestal*; the upper, divergent ends of pillar and back are united by the curving *neck*. The gut *strings*, stretched vertically between soundboard and neck, and tuned by *wrestpins* inserted in the latter, are 46 (or 47) in number, and variously colored to render them readily distinguishable; the 8 lowest strings are covered with fine wire. Compass, six and one-half octaves, from C_1^b to f^4 (g^4):

this is the fundamental diatonic scale; the intermediate chromatic tones are obtained by the use of 7 *pedals* adjusted in the pedestal, each pedal acting on all the strings of the same letter-name in such a way that, when pressed to its *first* position, the pitch of every string affected is raised a semitone, and, when the pedal is pressed down to its *second* position, a semitone higher. Thus, by depressing all 7 pedals once, the scale would be raised from C^b to C ; by depressing them twice, to C^\sharp (D^b); by suitable combinations, any desired key may be obtained. The depressed pedals are held in position by notches. As on the Jankó keyboard, the fingering of the scale is the same for every key. Natural harmonics are obtainable; the first harmonic (the octave of the tone of the open string) is that almost exclusively employed. Music for the harp is written on 2 staves as for the pftē.—In the old *single-action harp* each pedal can change the pitch of its note by only *one* semitone; scale, E^b ; compass, 5 octaves and a sixth, from F_1 to d^4 :

A *Double Harp* has 2 rows of strings tuned dissimilarly; a *Triple Harp* has 3 such rows. . . *Aolian h.*, see *Aolian*. . . *Couched h.*, the spinet. . . *Dital harp*, see *Dital*. . . *Double-action pedal-harp*, see *Harp*. . . *Welsh h.*, a kind of triple harp.

Horn. (Ger. *Horn*; Fr. *cor*; It. *cor'no*.)

One of a group of brass wind-instr.s distinguished by the following characteristics: Cupped mouthpiece of conical shape; conical tube, narrow and long, variously bent upon itself (the smallest horn generally used, in high B \flat , has a tube nearly 9 feet long; that an octave lower in pitch, nearly 18 feet); wide and flaring bell; the tone is rich and mellow, sonorous and penetrating; the compass lies between the 2nd and 16th tones of the harmonic scale. The older *natural* or *French Horn*, yielding only the natural tones supplemented by

"stopped tones", has a fairly complete chromatic scale of 2 octaves and a fifth, from the 3rd partial (lowered by stopping) up to the 16th partial; there are 16 crooks in all, giving a total possible compass of 3½ octaves:

but only 8 or 10 are in general use in the symphony-orchestra; the following tones at either end of this scale are difficult:

Thus the highest "safe" tones on the horns in common use would be (according to GEVAERT):

Horn in B \flat C D E \flat E F G A \flat A B \flat (C)

Partial tone 16 16 15 14 13 13 12 10 10 10 10

The stopped tones have a peculiarly sombre quality, and are often utilized for special effects; they can be produced on the valve-horn in exactly the

same manner as on the natural horn (also comp. *Trumpet*). This modern *Valve-horn* is usually constructed in the following sizes [RIEMANN]:

the given pitch-note being in each case the 2nd partial tone (octave of the generator), and represented in each case by the note: posing instr.; when the G-clef is employed, the notes are written an octave higher than when noted in the F-clef, consequently

The upper end was furnished with a head of leather or parchment which could be tightened or relaxed, thus raising or lowering the tone. It was struck with the fingers, and considerable skill was required to play it. From the indistinct accounts of the old Spanish writers it appears to have yielded, in conjunction with the *Teponaztli*, a rude harmonic bass accompaniment.

A stringed instr. with a body shaped like that of a lute or guitar, and from 4 to 6 strings, only 2 of which are melody-strings, the others being merely drones tuned a fifth apart. The melody-strings (compass ) are stopped by about 2 (means of keys controlled by the left hand; the right hand turns a crank at the tail-end of the instr., which causes a rosined wheel impinging on all the strings to revolve, thus producing the harsh and strident tone. This wheel and the key-mechanism are contained in an oblong box corresponding to the neck of the lute, etc., but set directly on the belly, only the peg-box and head projecting beyond. The melody-strings pass through this box, and are attached to a tailpiece; the drones lie outside. The music produced is of the rudest description.

Intermède (Fr.) I. Interlude 1.—2. An operetta in one act.

Interme'dio (It., dimin. *intermediel'to*.) Interlude 2.

Intermez'zo (It.) *Intermezzi* were originally short mus. entr'actes in the Italian tragedies, of a very simple description, and quite independent of each other; towards the end of the 16th century they assumed larger proportions; finally they were treated as separate parts of a whole mus. drama, of a less serious cast than the principal work which they were intended to embellish, their acts alternating with those of the latter.—

Having reached this stage, they merely had to be detached from the larger work to form a self-existent *operetta* or *opera buffa*.—Instrumental music sometimes takes the place of the old *intermezzi* in modern dramas (e. g. that to the "Midsummer-night's Dream," by Mendelssohn)... The term *intermezzo* is also technically applied to many short movements connecting the main divisions of a symphony or other extended work; sometimes to entire long movements, or even to independent compositions... *Intermezzi* in the Suite are such dances (movements) as do not form one of its regular constituent parts, but are occasionally introduced for variety's sake, and usually between Sarabande and Gigue.

Interrogati'vus. One of the *accentus eccl.*

Interrot'to (It.) Interrupted... *Inter-ruzio'ne*, interruption.

Interval. (Lat. *interval'lum*; Ger. *Intervall'*; Fr. *intervalle*; It. *interval'lo*.) The difference in pitch between 2 tones. —For naming the various intervals there are 2 systems in vogue; both are founded upon and derived from the names of the intervals formed, in the diatonic major scale, between the key-note and the successive ascending degrees; in both the 1st degree is called a *Prime* (or *First*), the 2nd a *Second*, the 3rd a *Third* (or *Tierce*), 4th a *Fourth* (or *Quart*), 5th a *Fifth* (or *Quint*), 6th a *Sixth* (or *Sext*), 7th a *Seventh* (or *Sept*), and the 8th an *Octave* (or *Eighth*). In the typical scale of *C*-major the standard intervals are as follows, counting upward from the key-note, *C*:

(TABLE I.)

(i) The older system, that in general use, will be explained first; premising, that intervals are always considered as measured *upwards* from the lower tone to the higher, unless expressly accompanied with the epithet *below* or *lower*. Table III includes the standard intervals and their direct derivatives between

Table III shows (A) that each *major* or *perfect* interval, when widened by a semitone, becomes *augmented*; that each *major* interval, narrowed by a semitone, becomes *minor*; and that each *minor* or *perfect* interval, narrowed by a semitone, becomes *diminished*; (B) that by inverting the intervals:

	I	2	3	4	5	6	7	8	
	8	7	6	5	4	3	2	I	
a Perfect									interval becomes perfect
a Major									minor
a Minor									major
an Augmented									diminished
a Diminished									augmented;

(C) the regular order of the standard intervals according to their pitch (compare *Vibration*), both in *Just Intonation* and *Equal Temperament*, intervals bracketted together being Enhar-

monic; (D) the division of the Octave in Equal Temperament.

(2) In the newer system, all the standard intervals are called *major*; any *major* interval widened by a semitone becomes *augmented*, if narrowed by a semitone, it is *minor*; and any *minor* interval narrowed by a semitone becomes *diminished*:

(TABLE II.)

Inter-vals.	Ma-jor.	Aug-mented.	Minor.	Diminished.
Second...C—D	C—D#	C—Db	C—Db	C—Db or C#—Db
Third...—E	—E#	—Eb	—Eb	—Eb
Fourth...—F	—F#	—Fb	—Fb	—Fb
Fifth...—G	—G#	—Gb	—Gb	—Gb
Sixth...—A	—A#	—Ab	—Ab	—Ab
Seventh...—B	—B#	—Bb	—Bb	—Bb
Octave...—C	—C#	—Cb	—Cb	—Cb

The latter system is simpler and more consistent than the old, and might be advantageously substituted for it if all leading musicians in England and America would agree to adopt it; otherwise, its occasional use can serve only to increase the confusion unhappily prevailing in English musical terminology. In this Dictionary the older system is adhered to throughout. An interval is: —*Augmented*, when wider by a chromatic semitone than major or perfect... *Chromatic*, when occurring between a key-tone and a tone foreign to the key... *Compound*, when wider than an octave; thus a Ninth is an Octave plus a Second, a Tenth is an Octave plus a Third, etc... *Consonant*, when not requiring resolution (comp. *Consonance*)... *Diatonic*, when occurring between 2 tones belonging to the same key (exceptions, the *augm.* 2nd and 5th of the harmonic minor scale)... *Diminished*, when a chromatic semitone narrower than minor or perfect... *Dissonant*, when requiring resolution (comp. *Dissonance*)... *Enharmonic*, when both its tones, though having different letter-names, are represented by one and the same tone on an instr. of fixed intonation... *Extreme*, see *Augmented*... *Flat*, see *Diminished*... *Harmonic*, when both tones are sounded together... *Imperfect*, see *Diminished*... *Inverted*, when the higher tone is lowered, or the lower tone raised, by an octave (see Table I)... *Major*; according to Table I, the major intervals of the major scale are the Second, Third, Sixth, and Seventh; acc. to Table II, all its intervals are major... *Melodic*, when the 2 tones are sounded in succession...

The *timpani* were formerly noted as transposing instr.s (i. e. in *C*, with the added direction "Timpani in *E* \flat , in *D* \flat ," etc.), but now the notes desired are generally written. They are struck with 2 sticks having elastic handles and soft knobs of felt, sponge, and the like.

Key (1). (Ger. *Ton'art*; Fr. *mode, ton*; It. *mo'do, to'no*.) (Comp. *Tonality*.) Each key is named after its key-note, as *C*-major, *a*-minor. See General View, page 108. The following keys:

	} C-sharp maj. [=D-flat maj.] } A-sharp min. [=B-flat min.]
	} C-flat maj. [=B-major] } A-flat min. [=G-sharp min.]

are comparatively little used, being enharmonically equivalent to the simpler keys added in brackets... *Attendant keys*, see *Attendant*... *Chromatic key*, one having sharps or flats in the signature; opp. to *natural key*... *Extreme*

Keyboard. (Ger. *Klav'atur*; Fr. *clavier*; It. *tastatu'ra, tasti'ra*.) The keys or digitals of the pfte., organ, etc., taken collectively. The modern standard keyboard is the product of an evolution extending over 1,000 years.—Its only successful rival at present is the **Jankó keyboard**, inv. by Paul von Jankó of Totis, Hungary, in 1882, which presents to the eye the appearance of six different rows of keys arranged stepwise, one above the other. But the corresponding keys in the 1st, 3rd, and 5th rows are all fixed on one key-lever; thus, if *C* be struck in the 1st (lowest) row, the corresponding keys in the 3rd and 5th rows are depressed; further, the 2nd, 4th, and 6th rows are similarly connected; so that any given tone can be struck in three different places, admitting of the choice of the key most convenient to the position of the hand at any given instant. The 6 rows are therefore arranged in 3 pairs; in the lower row of any pair the succession of

Consequently, a chromatic scale is played by the simple alternation between the successive keys of any 2 adjoining rows; the fingering of all the major scales is uniform, and all minor scales are also fingered alike. This plate is ornamented with bosses in front, and on the rear with several small bronze tassels, depending loosely. The body has no ribs, the back being, like that of the mandolin, in the vaulted shape of half a pear. The strings, attached to a bridge fixed on the face of the instr., and passing over or beside the fretted fingerboard, were plucked by the fingers, and varied in number from 6 up to 13, the highest or melody-string (*treble, canto*) being single, and the others in pairs of unisons. Bass strings *off* the fingerboard, each yielding but one tone, were generally attached to a second neck; they were in later times covered with silver wire, the other strings being of gut. These bass strings were introduced in the 16th century, and led to divers modifications in the build of the instr.; the various forms of large doubled-necked lutes then evolved (*theorbo, archiliuto, chitarrone*) being general favorites, and holding, from the 15th to the 17th century, the place in the orchestra now occupied by the bass violins. Music for the lute was written in tablature, there being 3 systems (French, Italian, and German)... A lute-player is variously called a *lutenist, lutanist, lutinist*, and *lutist*.

10 in number, were stretched from this cross-bar to or over a bridge set upon the soundboard, and were plucked with a plectrum. The names of the strings (whence were derived the names of most of the tones in the Greek modes) on the 8-stringed lyre were as follows:

Hyp'ate, "uppermost" (as the lyre was held); the longest and deepest-toned.

Parhyp'ate, "next to hypate".

Lich'anos, "forefinger-string".

It was chiefly used to accompany songs and recitations.—2. An instr. used in military bands, consisting of loosely suspended steel bars tuned to the tones of the scale and struck with a hammer.—3. This style of composition appears to have had its rise in the Low Countries towards the middle of the 15th century, spreading thence to other European States, and cultivated with peculiar success in Italy and England well into the 18th century; in England the Madrigal Society still flourishes. Mei'ster (Ger.) Master... *Mei'sterfuge*, fuga ricerca'ta... *Mei'stersinger* (or *-sänger*), in Germany, the successors of the *Min'nesänger* (Troubadours), but, unlike the latter, chiefly artisans, who formed guilds in various cities for the cultivation and propagation of their art, the stringent rules for which were contained in the *Tabulatur'*. Their poems were founded for the greater part on biblical subjects; the musical treatment was apt to be dry and prosaic.—They originated about the 14th century in Mainz, reached their zenith in the 15th and 16th centuries (notably under Hans Sachs of Nuremberg), and thereafter decayed gradually, the last society becoming extinct in 1839 (Ulm).

Melancoli'a (It.), **Mélanchole** (Fr.) See *Malincolia*.

Mélange (Fr.) A medley, pot-pourri.

Melis'ma (Gk.) 1. A melodic ornament, fioritura, grace; colorature.—2. A *Cadenza* 1. . . *Melismat'ic*, ornamented, embellished; said of vocal or instrumental music abounding in ornaments; also, specifically, *melismatic song*, that in which more than one tone is sung to a syllable; opp. to *syllabic song*.

Melo'deon. The original American organs were called melodeons or melodiums. See *Reed-organ*.

Melo'dia. (Organ.) A variety of stopped diapason nearly resembling the Clarabella.

Melod'ic. Pertaining to the progression of single tones; hence, *vocal*, as a *melod-ic interval*.

Melo'dica. A small variety of pipe-organ inv. in 1770 by Joh. Andr. Stein of Augsburg, having a tone like the *flûte à bec*, and a compass of but $3\frac{1}{2}$ octaves. It was used ordinarily to play the *melody* to a harpsichord- or pfe.-accompaniment; hence the name. An

excellent crescendo and decrescendo were obtainable by varying the finger-pressure on the keys.

Melo'dico (It.) Equiv. to *Cantando*.

Melo'dicon. A keyboard instr. inv. by Peter Rieffelsen of Copenhagen, in 1800, in which the tones were produced by tuning-forks.

Melo'diograph. See *Melograph*.

Melo'dion. A keyboard instr. inv. by J. C. Dietz, of Emmerich, in which the tones were produced by vertical steel bars chromatically graduated; these bars being pressed by the digitals against a rotating cylinder. *Forte* was obtained by a quicker, *piano* by a slower, rotation. Compass, $5\frac{1}{2}$ -6 octaves.

Melo'dium. 1. Melodeon.—2. (Ger.) Alexandre organ.

Mel'odrama. 1. Originally, a musical drama.—2. In modern usage, (a) stage-declamation with a mus. accomp.; (b) a form of the drama in which the music plays a very subordinate part, and the plot is more or less romantic and sensational.

Mel'ody. (Ger. *Melodie'*; Fr. *mélodie*; It. *melodi'a*.) 1. The rational progression of single tones; contrasted with *Harmony*, the rational combination of several tones.—2. The leading part in a movement, usually the soprano.—3. An air or tune.

Mel'ograph. Name of various mechanical devices for recording the music played on a pfe. One of the latest and most successful is the *electric m.* or Phonautograph (inv. by Fenby, in England), in which the pressure on the digitals closes an electric circuit, effecting a record on paper as in the Morse system of telegraphy. A cardboard stencil forming an exact copy of the record can be made to reproduce the music when placed in the *Melotrope*, a mechanical attachment to a pfe. by means of which the digitals are depressed as if by the player's fingers.

Mel'ophone. A variety of Concertina.

Melopian'o. A pfe. inv. by Caldera of Turin, in 1870, in which the tone is sustained by rapidly repeated blows of small hammers attached to a bar passing over and at right angles to the strings, the bar being kept in vibration

by means of a treadle worked by the player. *Crescendo* and *decrescendo* effects are producible at will, and the tone is of delightful quality.

Mel'oplaste. A simplified method for learning the rudiments of music, inv. by Pierre Galin about 1818. Instead of teaching the notes, clefs, etc., at first, he took merely the 5 lines of the staff, singing familiar airs to the syllables *do, re, mi, etc.*, at the same time showing with a pointer the position on the staff of the notes sung. For teaching rhythmical relations he used a double metronome marking both measures and beats.

Me'los (Gk.) "Song". The name bestowed by Wagner on the style of recitative exemplified in his later musical dramas. (See *Recitative*.)

Mel'otrope. See art. *Melograph*.

Mensur' (Ger.) 1. *Mensur'ra*, i. e. the time of a movement (mensurable music).—2. Scale (of organ-pipes).—3. In other instr.s., the various measurements requisite for their true intonation (as length of tube, distance between finger-holes, thickness of strings, etc.)

Metal'lophone. 1. A pft. in which graduated steel bars take the place of strings.—2. An instr. like the xylophone, but with bars of metal instead of wood.

Meter, Metre. 1. Metre in music is the symmetrical grouping of musical rhythms; a disposition of musical members akin to the arrangement of the poetic strophe. It differs from Form in having to do merely with the rhythmical groupings within compositions; from Rhythm, in treating of the symmetrical arrangement of the smaller tone-groups, the *articulation* of which produces the rhythm or time. These definitions are, however, not universally binding, *metre* and *rhythm* being used sometimes as interchangeable terms, and sometimes with significations exactly the reverse of those just given. In metre the smallest metrical element (unit of measure) is the Measure; the combination of 2 measures (either simple or compound) produces the Section; of 2 sections, the Phrase; of 2 phrases, the Period (of 8 measures), which may be extended to 12 or 16 measures; beyond the period of 16 measures the metrical divisions seldom go, i. e. they are not followed by the ear as *metrical*, but as *thematic* divisions (see *Form*).—2. The metre of English hymns is classified, according to the feet used, as *iambic, trochaic, or dactylic*; in the syllabic schemes below, the figures indicate the number of syllables in each line. Variants are not infrequent in modern hymnology.

A. *Iambic metres*: Common metre (C. M.), 8 6 8 6; Long metre (L. M.), 8 8 8 8; Short metre (S. M.), 6 6 8 6; these have regularly 4 lines to each stanza; when doubled to 8 lines they are called Common metre double (C. M. D.), Long metre double (L. M. D.), and Short metre double (S. M. D.). They may also have 6 lines in each stanza, and are then named

Common particular metre (C. P. M.), 8 8 6 8 8 6; Long particular metre (L. P. M.), or Long metre 6 lines, 8 8 8 8 8 8; and Short particular metre (S. P. M.), 6 6 8 6 6 8. Besides the above, there are Sevens and Sixes 7 6 7 6; Tens 10 10 10 10; Hallelujah metre 6 6 6 6 8 8 (or 6 6 6 4 4 4); etc.

B. *Trochaic metres*: Sixes 6 6 6 6; Sixes and Fives, 6 5 6 5; Sevens 7 7 7 7; Eights and Sevens 8 7 8 7; etc.

C. *Dactylic metres*: Elevens 11 11 11 11 11; Elevens and Tens 11 10 11 10; etc.

These are most of the metres in general use (comp. *Common*).

—3. In ancient prosody, the science of *Metrics* treated of the *quantity* (length) of the syllables; whereas in modern English poetry all accented syllables are treated as long, the unaccented as short. The metrical unit is a *mora* (time) or *syllable*; *syllables* combine to form *feet*; *feet* to *cola*, *verses* (i. e. lines), or *periods*; *periods* to *strophes*; *strophes* to *pericopes*; and *pericopes* (or lines, or *periods*) to *poems*. . . *Syllables* are either short (◡), long (—), or common (≡); the long being equivalent to 2 short, and the common either long or short according to position. A *Foot* is a combination of 2 or more syllables.

Méthode (Fr.), **Me'todo** (It.) Method.

Metro'metro (It.), **Métrôme'tre** (Fr.) A metronome.

Mé'tronome. (Fr. *métronome*; Ger. *Metronom*; It. *metro'nomo*.) A double pendulum, weighted below, actuated by clockwork, and provided with a graduated scale on which a slider can be moved up and down, the slider determining by its height how many beats the pendulum shall make per minute; often with a bell-attachment (*Bell-metronome*). With the slider set at 60 the pendulum makes one beat per second. . . *Metronome-mark* (*metronom'ic mark*), a mark set at the head of a composition for exactly indicating its tempo; e. g., M. M. $\text{♩} = 60$ means, that the time-value of one quarter-note is equal to one pendulum-beat with the slider set at 60; M. M. standing for "Maelzel's Metronome" after its reputed inventor, Maelzel of Vienna (1816).—The *M.* is much used by beginners and students, for learning to play strictly in time, and for timing their practice.

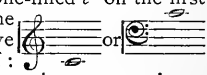

Me'tro (It.), **Me'trum** (Lat.) Metre.

Met'te (Ger.) Matins (in the R. C. Church).

Mettez (Fr.) Draw, add (organ-mus.)

Mez'zo,-a (It.) Half. . . *A mezza d'ria*, see *Aria parlante*. . . *Mezzo for'te* (*mf*), half-loud. . . *Mezzo lega'to*, in pite-technic, a variety of touch resembling *leggi'e'ro* in being a down-stroke without pressure, but differing from it in requiring that greater attention be paid to a forcible stroke than to a rapid, springy return of the finger. . . *Mezza ma'nica*, half-shift. . . *Mezza orche'stra*, with half the string-band. . . *Mezzo pia'no* (*mp*), half-soft, less loud than *mezzo for'te*. . . *Mezzo sopra'no*, the female voice intermediate between soprano and alto, partaking of the timbre of both, and usually of small compass ($a-f^2$, or $a-g^2$), but very full-toned in the medium register. . . *Mezzo teno're*, same as *Barytone*; only the *mezzo tenore* is in quality rather a low tenor than a high bass. . . *Mezza vo'ce*, with half the power of the voice; nearly equivalent to *mezzo for'te*, in singing or playing.

Mi. 1. The third of the Aretinian syllables.—2. Name of the note *E* in France, Italy, etc. . . *Mi contra fa est diabolus in musica*, "mi against fa [i. e. the tritone] is the devil in music", a theorem of medieval musicians expressive of their abhorrence of the melodic step, and even of the harmonic relation, of the tritone (the $mi=B\sharp$ of the "hard" hexachord and the $fa=F$ of the "natural" hexachord).

Middle-C. The one-lined *c'* on the first leger-line below the treble staff or above the bass staff:  . . . *Middle part* or *voice*, same as inner part.

Militairement (Fr.), **Militarmen'te** (It.) In military style. Also (It.) *Alla militare*.

Militär'musik (Ger.) 1. Military music. —2. A military band.

Military music. The military band differs from the orchestra in being a wind-band, (composed solely of wind-instruments), and in admitting the cornet, bugle, saxophones, and other instr.s whose timbre is considered not to blend well with those of the symphony-orchestra. Another peculiar feature is the large reinforcement of the clarinets, which take the place and parts of the violins and violas in the orchestra. Military bands may contain anywhere from 40 to 90 performers;

that of the 22nd Regt., New York, has 66, namely:

2 piccolos	1 contraffagotto
2 flutes	1 E♭ cornetto
2 oboes	2 1st B♭ cornets
1 A♭ piccolo clarinet	2 2nd " "
3 E♭ clarinets	2 trumpets
8 1st B♭ clarinets	2 flügelhorns
4 2nd " "	4 French horns
4 3rd " "	2 E♭ alto horns
1 alto	2 B♭ tenor horns
1 bass	2 euphoniums
1 sopr. saxophone	3 trombones
1 alto	5 bombardons
1 tenor	3 drums
1 bass	1 pair cymbals
2 bassoons	

In France, in accordance with the official order promulgated Nov. 17, 1892, the regular infantry bands comprise the following instruments:

2 flutes	3 trombones
2 small clarinets	2 alto saxhorns
8 large " "	3 alto saxotrombas
2 oboes	5 bass saxhorns
1 sopr. saxophone	1 contrabass saxh.
1 alto	1 " tuba
1 baryt. " "	1 shallow drum
1 tenor " "	1 bass drum
2 cornets	1 pair cymbals
2 trumpets	

or 40 in all (14 wood-wind, 23 brass, 3 percussives).—The principal innovations on the former standard (established by imperial decree of March 26, 1860) are (1) disuse of wooden flutes, for which metal flutes are substituted; (2) suppression of 4 saxophones, and substitution of 4 more clarinets; (3) suppression of 2 barytone saxhorns, for which 2 bass saxhorns are substituted.

Mimodrama. (Fr. *mimodrame*.) A pantomimic dramatic performance, often accomp. by music.

Min'nesinger, -sänger (Ger., sing. and pl.) One of the German troubadours, or lyric poets and singers of the 12th and 13th centuries, who were exclusively of noble lineage; distinguished from their Southern contemporaries by their chaster conception of love (*Min'ne*, *Frau'endienst*). They accompanied their songs (*Min'nesang*, written chiefly in the Swabian dialect) on the

viol or *arpanetta*, and their rivalry culminated in grand poetical contests, such as the one immortalized by Wagner in "Tannhäuser." Their art originated in Austria, spreading thence to the Rhine, Thuringia, and Saxony; in the hands of their successors, the *Mei'stersinger*, it degenerated past recognition.

Mi'nor. (Ger. *klein*, *moll*; Fr. *mineur*; It. *mino're*.) Lesser; smaller (comp. *Interval*, *Major*, *Phone*). . . *Minor tone*, the lesser whole tone 10:9.

Minstrel. The minstrels of the middle ages were professional musicians who sang or declaimed poems, often of their own composition, to a simple instrumental accomp. They were followers of the nobility in court and camp. The French *ménéstrcls* of the 8th century and later were the musical attendants of the *trouvères* and *troubadours*, having to execute practically the musical conceptions of their noble masters. Thus they occupied from the outset a subordinate position; their art slowly degenerated in England, whither they were transplanted at the Norman Conquest, until they were classed by statute (1597) with "rogues, vagabonds, and sturdy beggars"; in France their guilds were maintained down to the Revolution. In England they coalesced with the Anglo-Saxon "gleemen". Their favorite instr. was the rebec. . . *Negro Minstrels*, singers and actors portraying (originally) scenes from Southern plantation-life. The chief performers of the troupe are the *middle-man* or *interlocutor* and the two *end-men* (so called from their respective positions in the semi-circle of performers on the stage); the former leads the talk and gives the cues, while the latter preside over the tambourine and "bones", and crack the jokes.

Minuet. (It. *minuet'to*; Fr. *menuet*; Ger. *Menuett'*.) One of the earlier French dance-forms, supposed to have originated in Poitou; it dates as an art-product from about Lully's period (end of 17th century), and, as such, properly consists of 2 minuets, or a double minuet with contrasted sections of 16 measures each, the second forming the Trio, after which the first is repeated. It is in triple time, and has a slow, stately movement, eschewing all ornamentation. It frequently occurs in the Suite, Sonata, and Symphony; Beethoven was the first to introduce in its

stead, in the 2 latter, the livelier and freer Scherzo; in the Suite it figures, by way of contrast, between the Sarabande and Gigue.

Miracle, Miracle-play. See *Mystery*.

Miscel'la (Lat.) A mixture-stop.

Misce de voix (Fr.) Messa di voce.

Misere're (Lat.) The first word of the Psalm LI (in the Vulgate, L), which begins: "Miserere mei, Domine" (Pity me, O Lord); hence, the name of this Psalm, or of a musical setting of it, sung in the Catholic Churches as part of the burial service, at the Communion of the Sick, and the like. During Holy Week it is performed with peculiar solemnity in the Sistine Chapel at Rome.

Mis'sa (Lat.) The Mass...*M. brev'is*, short mass...*M. cantá'ta*, chanted mass...*M. pro defunct'is*, see *Requiem*. . . *M. solem'nis*, or *solen'nis*, high mass.

canon, one in which the successive parts enter at different intervals...*Mixed chorus, quartet, voices*, vocal music combining male and female voices.

Mixolyd'ian. See *Mode*.

Mixture. (Ger. *Mixtur'*; Fr. *fourniture*; It. *ripie'no, accor'do*.) A compound auxiliary flue-stop with from 3 to 6 ranks of pipes sounding as many harmonics of any tone represented by a given digital. These harmonics are generally octaves and fifths of the fundamental tone; sometimes a third, or even a seventh, is added; they are higher in comparative pitch for low tones than for high ones, (see *Break 3*); e. g. for the tone *C* the 3-rank mixture would usually contain $c^1-g^1-c^2$; and for $c^1, c^2-g^2-c^3$ (not $c^3-g^3-c^4$). In some old German organs mixtures are found having from 8 up to 24 (!) ranks, there being, of course, several pipes to each harmonic. —Mixtures are used to reinforce and "brighten" the upper partials of the heavier foundation-stops.

Mo'bile (It.) With a facile movement, readily responsive to emotion or impulse.

Mode. 1. For Greek modes, see *Greek music*.—2. (Lat. *mo'dus*.) The medieval church-modes were octave-scales, like the Greek modes, and also borrowed their names (see below) from the latter; but they, and the fundamental diatonic scale *A-a*, were conceived as *ascending* scales, a distinct departure from ancient theory. They were called *church-modes* because each chant in the Gregorian antiphony was kept strictly within the compass of some one of these octave-scales, without chromatic change save that from *B \flat* to *B*, or vice-versa.

Mode XIV [or XII] (Hypoio'nian).

In the authentic modes the *Final* (what we should call the *key-note*) is the lowest tone; in the plagal modes, a fourth above the lowest; it is marked by a whole note in the Table. Each plagal is derived from a parallel authentic; St. Ambrose is supposed to have established the first 4 authentic modes, to which St. Gregory added the corresponding plagals; these 8 were exclusively employed in serious composition down to the 16th century, despite the lack of any scale similar to the (C)

major and (A-) minor scales of modern music; then, however, the last 4 modes were added. The *Locrian* (B-b) and *Hypolocrian* (F-f) were rejected as useless, neither fulfilling the law that each authentic mode should be divisible into a perfect fifth plus a perfect fourth, and each plagal mode into a fourth plus a fifth.—Both the names, and the prefix *hypo-*, are used in a sense different from that of the original Greek modes, the medieval theorists having misinterpreted the Greek nomenclature.

The gradual development of monodic, harmonic, and chromatic music, the evolution of the leading-note, the acceptance of the third as a consonance, and the recognition of the predominance of the tonic triad, with the modern system of transposing tempered scales in the major and minor modes thence resulting, led to the gradual disuse of the church-modes.

A very ancient instr. for the precise mathematical determination of the intervals, consisting of a single string stretched over a soundboard and provided with a bridge sliding on a graduated scale, by means of which any desired division of the string could

be isolated, and intervals of true pitch obtained.—An instr. of the same name, but furnished with several strings for the purpose of obtaining harmonic effects, was the precursor of the clavichord.—2. The tromba marina.—3. A clavichord.—4. (Ger., recent.) A kind of bow-zither, having one string stretched over a fretted fingerboard attached lengthwise to the top of an oblong resonance-box.

Mon'ody. (Ger. and Fr. *Monodie'*; It. *monodi'a*.) A style of composition (*monod'ic* or *monophon'ic*) in which one part, the melody, predominates over the rest, they serving as a support or accomp. to it. It took its rise in Italy about 1600, in the form of a vocal solo with instrumental accomp., the latter being at first a mere figured bass executed on the harpsichord, theorbo, etc. Its novelty lay, not in its newness, but in its employment and recognition by artists. It developed into the opera, cantata, and oratorio on the one hand, and, on the other, into all those forms of instrumental music in which the element of accompanied melody is found, as the suite, symphony, etc. (Also *Homophony, Monophony*.)

Monoph'onous. Capable of producing but one tone at a time; opp. to *polyph'onous*... *Monoph'ony*, see *Monody*.

Mo'stra (It.) A direct.

Motet'. (Ger. *Motet'te*; Fr. *motet*; It. *motetto*.) A sacred vocal composition in contrapuntal style, without instrumental accomp. In former times the *a cappella* style was not always strictly adhered to. The *motet* resembles the *anthem* in having a biblical prose text, but differs from it in being polyphonic; compositions in anthem-style are, however, sometimes called *motets*.—The Latin *mote'tus* is a term of various and sometimes obscure signification.

Motif (Fr.) A motive.

Motion. 1. The progression or leading of a single part or melody; it is *conjunct* when progressing by steps, *disjunct* when progressing by skips.—2. The progression of one part considered in relation to that of another;

contrary or opposite motion is that in which one part ascends while the other descends; *parallel* motion*, that in which both parts ascend or descend by the same interval; *oblique motion*, that in which one part is held while the other ascends or descends; *similar* motion*, that in which both parts ascend or descend together by dissimilar intervals; *mixed motion*, that in which 2 or more of the above varieties occur at once between several parts.

* N.B.—The above fine distinction between *parallel* and *similar* motion is very often not observed, the term *parallel motion* being used indiscriminately for both.

Mo'tive [sometimes pron. *mo-teev'*]. (Ger. *Motiv*; Fr. *motif*; It. *motivo*.)

1. A short phrase or figure (rhythmic, melodic, or harmonic) used in development or imitation.—2. A theme or subject (see *Leading-motive*).—3. Sometimes used for *Measure*, as the rudimentary element of the Period.—*Measure-motive*, one whose accent coincides with the measure-accent.

Mo'to (It.) 1. Motion...*M. contra'rio*, contrary motion...*M. mi'sto*, mixed motion...*M. obbli'quo*, oblique motion...*M. perpe'tuo*, perpetual motion...*M. rel'to*, similar motion.—2. - Musical box, Music-box.** The so-called *Swiss music-box* consists of a metallic cylinder or barrel studded with small pins or pegs, and caused to revolve by clockwork. In revolving, the pins catch and twang a comb-like row of steel teeth arranged in a graduated scale, each tooth producing a tone of very accurate pitch. In the larger instr.s the barrel may be shifted so as to play several tunes, or is made exchangeable for others.—For the newer music-boxes, compare *Symphonion*, *Libellion*.

The mute for the violin, etc., is a piece of brass or other heavy material, having cleft projections which permit of its firm adjustment on the bridge without touching the strings; its weight deadens the resonance of the sound-box. (Recently made in the form of a spring clip.) The direction for putting on the mutes is "con sordini"; for taking them off, "senza sordini".—2. A pear-shaped, leather-covered pad introduced into the bell of the horn or trumpet to modify the tone. Other forms of this mute are (for the horn) a pasteboard cone with a hole at the apex, and (for the trumpet) a cylindrical tube of wood pierced with holes.

The *Passion-plays* (still surviving at Oberammergau in Bavaria) are as old as the 7th or 8th century; the *Moralities*, a peculiar form of the Mysteries, in which abstract conceptions were personified, originated about the 13th century. The Mysteries were the precursors of the *Oratorio*.

rosin; the tone is like that of the harmonica. Inv. by Johann Wilde of St. Petersburg, toward the middle of the 18th century.

Such natural tones always belong to the series of higher partials (comp. *Acoustics*). These are the only tones which an instr. having a tube of invariable length (like the natural [French] horn) can yield; they are produced by the division of the vibrating air-column defined by their tube into aliquot (equal) parts of

constantly decreasing length. 'A tube of wide bore in proportion to its length will yield most readily the low and medium tones of the series, including the fundamental; a tube comparatively narrow, the medium and higher tones, omitting the fundamental. Any metal instr. yielding the fundamental tone (e. g. the Tuba) is called a complete instr. (Ger. *Ganz'instrument*); one incapable of yielding it (e. g. the Trumpet), an incomplete instr. (Ger. *Halb'instrument*). With a minimum air-pressure, and the lips most relaxed, the fundamental tone of the tube is sounded.

Neu'ma, Neume. 1. In Gregorian music, a melisma.—2. In medieval music notation, one of the characters used to represent tones, inflections, and graces. They were of different and fluctuating form and signification, at first with a curious outward resemblance to modern short-hand, later changing to coarse and heavy strokes and flourishes. The earlier neumes (8th to 13th century) can hardly be successfully deciphered, even with the aid of the letters (*litteræ signifiçatiuæ*) sometimes added, or of the lines (inception of staff-notation) employed, from the 10th century onward, to fix the pitch; for they were less an attempt at exact notation in the modern sense, than an aid to memory, a system of mnemonic signs. They are important as being the first attempt to exhibit the relative pitch of notes by their relative height on the page; they gradually passed over into the *notæ quadratæ* and ligatures of Plain Song.

Notation. Musical notation is the art of representing musical tones by means of written characters. Letters, numerals, and signs of different kinds, have been used. The signs now almost universally employed are called notes, and are written on a staff of 5 lines; hence, this system of writing music is termed *Staffnotation*. (Comp. also *Alphabetical notation*, *Neumes*, *Numerals*.)

§1. The lines and spaces of the staff indicate the pitch of the notes. The lines which Hucbald first used (about A.D. 900), served the same end by representing *strings*; in the spaces between, the syllables of the words sung were written, the relative pitch of the successive tones being (sometimes) marked by the letters *t* (= *tonus*, whole tone), and *s* (= *semitonium*, semitone).—This system was also used later for noting the primitive part-music called *organum* or *discant*; increasing the number of lines as far up or down as necessary, and setting the syllables for the several parts vertically one above the other.—An example of one-part notation acc. to Hucbald now follows:

	ta			
	li/ \		lus\	
	Ec\	Isra \ /	in quo \	o/ no\
S	ce\	/ he	do/	on\
	vere /		est	

Solution in choral notes:

Ec-ce ve-re Is-ra-he-li-ta, in quo do-lus non est.

Nearly contemporaneously with Hucbald's invention, an innovation appeared in neumatic notation; a red horizontal line was drawn across the page, and all neumes written on this line were of the same pitch, this pitch being fixed by a letter *f*: set before the line. A second line, but yellow, was soon added for *c*¹ above the *f*-line (or below, for plagal melodies); the two greatly facilitated the reading of written music. Another improvement, in a different direction, is shown by an orderly system of lines marked in regular succession by Greek letters set before them, the tones being represented by points or dots on the lines. To Guido d'Arezzo is generally ascribed the systematization and introduction (about 1026) of the 4-line staff, in which both lines and spaces were at length utilized; he retained the red and yellow lines, added a third (black) line between them for *a*, and a fourth (black) line either above or below these three, according to the range of the melody written, for *e*¹ or *d*; he did not use notes, but either letters or neumes.

§2. A staff being thus established, and affording a firm basis for exactly fixing the pitch of written music, the neumes hitherto in ordinary use gradually lost their hieroglyphical appearance and became transformed into the **Choral Notes** of Plain Chant, the regular square form of which (■) gave rise to the name *nota quadrata* or *quadriquarta*, other shapes occurring only occasionally in certain figures ■ or ◆ or ◆. The 4-line staff is still retained in Plain Chant; other staves, having from 6 to 15 or more lines, were arbitrarily em-

ploied down to the 15th century, when the 5-line staff for all vocal music except Plain Chant, and the 6-line staff for organ-music, were universally adopted; the present 5-line staff superseded the latter after the invention of music-printing.—All this time the form of the clefs was likewise changing, the original *f* and *c* becoming:

(*f*) (*c*)

etc.; the *g* also assumed a great variety of fantastic shapes before the modern forms were finally settled.

§3. **Mensurable notation**, differing from that of Plain Chant by expressing a determinate (relative) time-value of the tones in its notes, which were invented for the exact indication of rhythmic relations, appeared near the beginning of the 12th century. The notes in use for some 200 years, and imitated from Plain Chant, were the *Large* (■) or *duplex longa* or *maxima*; the *Long* (■) or *longa*; the *Breve* (■); and the *Semibreve* (◆ or ▼); to which were then added the *Minim* (♫) and *Semiminim* (♫). Early in the 15th century the first five were supplanted by the *open* notes (large ■, long ■, breve ■, semibreve ◆ or Δ, minim ♫), the smaller notes which had been gradually added being written in 2 forms:

Semiminima [♫] or ♫.
 Croma or Fusa [■] or ◆ or ♫.
 Semicroma or Semifusa [♫] or ♫ or ♫.
 Below are the corresponding rests:

Perfect Large-rest.	Imperf. Large-rest.	Perf. Long-rest.	Imperf. Long-rest.	Breve-rest (Pausa)	Semibr.-rest (Semipau.)	Minim-rest (Suspirium)	Semiminim-rest (Semisuspirium).	Croma-rest	Semicr.-rest
				—	—	—	—	7-or	7-or

—The single notes were often joined in groups (comp. art. *Ligature*).—The angular notes of measured music were not finally supplanted by modern round notes, in music-printing, till about 1700, though in MS. music they had been freely employed since the 16th century.

For determining the relative time-value of the notes, various and often conflicting rules were made for the *Modus* (mode), *Tempus* (time-value of the breve), *Prolatio* (prolation), *Color*, *Position*, etc.; a brief explanation of the 16th-century rules follows, premising, that the terms *perfect* and *imperfect* refer to the measure or time, *triple* time being regarded (out of reverence for the "Blessed Trinity") as perfect, while *duple* time was held to be imperfect.

MODUS (mode) governed the subdivision of the *Large* into Longs, and of the *Long* into Breves: in the

Modus major perfectus, I \equiv 3 \equiv

" " imperfect, I \equiv 2 \equiv

" " minor perfectus, I \equiv 3 \equiv

" " imperfect, I \equiv 2 \equiv

TEMPUS (time) governed the subdivision of the *Breve* into Semibreves; in Tempus perfectum (sign the circle

○), I \equiv 3 \diamond

Tempus imperfect. (sign the semic.

⌋), I \equiv 2 \diamond

PROLATIO (prolation) governed the subdivision of the *Semibreve*; in

Prolatio major I \diamond = 3 \diamond

" " minor I \diamond = 2 \diamond

the former marked by a dot in the time-signature (⊙ or ⊚), the latter simply by the absence of a dot.*

The usual *mode-signatures* were vertical strokes (long-rests) at the head of the staff; e. g., with the signs for *tempus* and *prolatio*:

Modus maj. perf.
Modus min. perf.
Tempus perfectum
Prolatio major

Modus maj. imperf.

Modus min. perf.

Tempus imperfec.

Prolatio major

Modus maj. perf.

Modus min. imperf.

Tempus perfectum

Prolatio minor

Modus maj. imperf.

Modus min. imperf.

Tempus imperfectum

Prolatio minor

N.B.—The time-signatures were often written smaller, between the second and third, or third and fourth, lines, etc.—The mode-signatures were also drawn from the fourth line down to the lowest; as a rule, they were omitted altogether, leaving the reader to ascertain the mode from conventional peculiarities in the notation called *signa implicita* or *intrinseca* (implied signs), in contradistinction to the *signa indicativa* (indicatory signs); as, in the *greater mode perfect*, a group of 3 black larges (see *Color*, below), or, in the *lesser mode perfect*, a group of 2 black longs, or 2 breve-rests at the beginning of a modal unit.

POSITION (i. e. the order in which the notes stood) was very important. A long followed by a long, or a breve by a breve, was always *perfect* (tripartite) by *position*; whereas a long preceded or followed by a breve, or a breve preceded or followed by a semi-breve, was always *imperfect* (bipartite) by *position*. After the minim was invented, the semibreve also became similarly influenced by its position; the minim and lesser notes were always perfect.

COLOR was the general designation for notes differing in color from those ordinarily used; the red note (*notula rubra*) of the 14th century generally marked a change from perfect to imperfect time, or vice versa; the white note (*notula alba*) was at first used like the red, but soon obtained the fixed and definite signification of *imperfectio* in opposition to the ordinary black note (of the 14th century); finally, the black note (*notula nigra*) of the 16th and 17th centuries, when the *white* notes were universally adopted, in its turn indicated imperfection; thus, from the 15th century onward, groups of 2 or more black notes had the *proportio hemiolia* to the surrounding white notes, i. e. their time-value stood to that of the latter in the ratio of 2 to 3,—hence their name *Hemiola* or *Hemiolia* (q. v.)

AUGMENTATION AND DIMINUTION. Terms used loosely to express any increase or decrease in the time-value of the notes; but signifying, specifically, (*augmentatio*) a retarding of the tempo, generally doubling the *integer valor*;

* The system previously in vogue referred to the relative time-value of the notes in general; thus, according to de Vitry (13th century):

I. prolatio: ■ = 3 \diamond , and I \diamond = 3 \diamond

II. " ■ = 3 \diamond , " I \diamond = 2 \diamond

III. " ■ = 2 \diamond , " I \diamond = 3 \diamond

IV. " ■ = 2 \diamond , " I \diamond = 2 \diamond

and (*diminutio*) an acceleration of the tempo, generally reducing the *integer valor* by one-half.—The *diminutio* was first expressed by a vertical line through the tempus-signature (♩ ♪ ♫ ♬), or by inverting the semicircle (⊖); also by adding to the *tempus*-signature, in the midst of a composition, numerals or fractions (3, 2, $\frac{1}{2}$, $\frac{1}{3}$, $\frac{1}{4}$); 2 or $\frac{1}{2}$ then signified that 2 *tactus* (semibreves ♫) were equal to 1 ♫ of the preceding tempo; etc., etc.—*Augmentatio* was generally employed to reverse a preceding *diminutio*; the sign for which was simply annulled by the usual sign for the *integer valor* (O, C) or by the inversion of the fraction ($\frac{1}{2}$, $\frac{1}{3}$, etc.) These fractions, however, were properly termed *signs of Proportion*.

PROPORTION. The theory of *Proportio*, from the 15th century onward, treats of the different time-signatures and tempo-marks applied to several parts progressing simultaneously; for instance, in a 4-part composition the *integer valor* might be marked for the discant in *tempus perfectum* O, and for the bass in *tempus imperfectum* C, the alto might be in *tempus imperfectum diminutum* ♪, while the tenor had *diminutio intripla* ♪ 3; further, changes might be made in any or all parts in the course of the piece, and were indicated by fractions (the *signs of proportion*; compare *Augmentation*, above).

ALTERATION (*alteratio*) was the doubling of the time-value of the second of 2

equal notes, and occurred either when the next largest kind of note was perfect, and the 2 (smaller) notes stood between two such large ones, or when the 2 notes were separated from a following note of equal or smaller value by a *punctum divisionis*; e.g. ≡ ♫ ♫ ≡ in *tempus perfectum* (O) would be expressed thus in modern notation (o · | d o | o ·).

The *Punctum* or *Punctus* (point, dot) had various uses; (a) *Punctum augmentatio'nis*, equivalent to our dot of prolongation; (b) *Punctum alteratio'nis*, which, placed before the first of 2 short notes lying between 2 long ones, doubled the value of the second short note and restored the perfection of the 2 long ones; (c) *Punctum perfectio'nis*, used in prololation, and also to restore the perfection of a note made imperfect by position; and (d) *Punctum divisio'nis* or *imperfectio'nis*, written between 2 short notes lying between 2 long ones, indicated the imperfection of both the latter.

None of these rules or signs were invariably followed or employed; the above remarks will serve, however, to give a correct general idea of the intricacies of *Mensurable Notation*. (Also see *Figura obliqua*.)

Note. (Ger. and Fr. *No'te*; It. *no'ta*.) One of the signs used to express the relative time-value of mus. tones. (Comp. *Notation*.) The notes employed in modern notation are the following:

is formed by octaves of the fundamental tones, as in the flute, the fingering of which is also similar to that of the oboe. The tone is very reedy and penetrating, though mild, and equally suited for scenes of pastoral gaiety or of lonely melancholy.—The oboe family is incomplete, only 2 instr.s; the ordinary *treble oboe* (formerly *oboe pic'cola*) and the *alt-oboe* (*cor'no inglese*) being now used, the former as a non-transposing instr. written in the *G*-clef, the latter as a transposing instr. The bass for the oboe is furnished by the bassoon. The *oboe d'amore* (Fr. *hautbois d'amour*) is at present played only in the historical concerts of the Brussels Conservatory; its pitch is a minor third below the treble oboe, and it differs from the obsolete *oboe bas'sa* (Fr. *grand hautbois*) in having a spherical bell with a narrow aperture, whereby the tone is sensibly subdued.—The parent instr. of the oboe was the *shawm*.

Op'era. (It. *O'pera* [*se'ria, buff'fa*, etc.], *dram'ma per mu'sica*; Fr. *opéra*; Ger. *O'per, Musik'drama*.) Modern opera, a form of dramatic representation in which vocal and instrumental music forms an essential and predominant element, took its rise towards the close of the 16th century in the striving of Italian (Florentine) composers and aestheticians to emancipate vocal music from the fetters of contrapuntal form. Their efforts led to the adoption of Monody

(*q. v.*) as an art-style, and its application to dramatic purposes. The first opera given was probably "Dafne" (music by Peri and Caccini, book by Rinuccini) in 1594, which was lauded to the skies as a successful return to the musical declamation of the ancient Greek tragedy. The dry *stilo rappresentivo* of the earliest operas was improved upon by Monteverde (1568-1643), who employed vocal and orchestral resources with a freedom undreamed of up to his time, justly earning him the title of "father of the art of instrumentation". His orchestra for the opera "Orfeo" (1608) is given below:

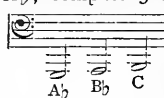

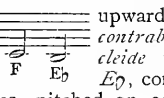

2 Gravicembani, 2 Contrabassi di Viola, 10 Viole da Braccio, 1 Arpa doppia, 2 Violini piccoli alla francese, 2 Chitarroni, 2 Organi di legno, 3 Bassi dagamba, 4 Tromboni, 1 Regale, 2 Cornetti, 1 Flautina alla 2da, 1 Clarino, con 3 Trombe sorde.

With Alessandro Scarlatti (1659-1725) begins the era of modern Italian opera; the sensuous charm of melody asserts itself more and more strongly; the singer becomes master of the situation, and operas are written to his order. This tendency, early transplanted with Italian opera to France and Germany, was combated by leading composers of those countries; Lully (1633-1687) and Gluck (1714-1787) were reformers of the musical drama in ridding vocal dramatic music of superfluous melismas and coloraturas, making it follow throughout the course and sense of the action.—The *grand* or *heroic opera*, with its full choruses and finales, its arias and recitatives, and all varieties of ensemble (duets, trios, quartets, etc.) is a growth due to the grafting of Italian opera upon the French musical stock, and is the style especially affected by modern French composers; the formal plan of Italian opera was likewise adopted by the great German composers, but with an infusion of artistic potency and sincerity which raise their productions far above the earlier level (Mozart, Beethoven), and a tinge of German romanticism which lends them a truly national color (Weber, Marschner). In comic opera the Italians were also pioneers (Pergolesi, Cimarosa); then follow the French (Grétry), and lastly the Germans (Mozart), all in the 18th century. Recent Italian operas show a distinct reaction against the old type, and bear witness to the strong influence of Germany (par-

ticularly of Wagner). France continues in the footsteps of her national composers (Grétry, Méhul, Boieldieu, Adam, Hérold, Halévy, Auber, Meyerbeer, Gounod).—To the purification, or rather annihilation, of the quasi-dramatic form of the grand opera, Richard Wagner (1813-1883) devoted all the powers of his marvelous genius. The guiding principle in his "Musikdramen" (musical dramas) is the harmonious coöperation of the dramatic, poetic, scenic, and musical elements; thus, the action of the drama must never be checked or veiled by purely musical episodes, however charming in themselves; the music must illustrate the (emotional) course and effects of the action, and nothing else. Hence the discontinuance of cut-and-dried movements and leveling of traditional forms, the rarity of full cadences and harmonic sequences, the richly modulated flow of inspired *melos*, the absence of "vain repetitions" of words and phrases, the uninterrupted dramatic interpretation by the orchestra of scenes and moods.—Both the grand opera and the Wagnerian drama find zealous advocates and imitators; these, together with operettes of most various complexion, are the typical forms of musico-dramatic composition at present. The *comic opera* varies the form of grand opera by the interpolation of spoken dialogue. . . . *Opéra bouffe* [formerly *bouffon*] (Fr.), light comic opera. . . . *Opera buffa* (It.), Italian opera of a light and humorous cast,—comic opera in which the dialogue is carried on in *recitativo secco*, instead of being spoken. . . . *Opéra comique* (Fr.), comic opera. . . . *Opera seria* (It.), serious (grand, heroic, tragic) opera; opp. to *opera buffa*.

Operet'ta (It.; Ger. and Fr. *Operet'te*.) A "little opera", with reference either to duration or style of composition. The text is in a comic, mock-pathetic, parodistic, or anything but serious vein; the music light and lively, in many cases interrupted by dialogue. The English *Ballad-operas* and the German *Singspiele* are varieties of the operetta. Modern masters of this style are Offenbach, Lecocq, Strauss, Sullivan, etc.

Oph'icleide. (It. *Ofcle'ide*.) The bass instr. of the key-bugle family (brass instruments with keys), now little used; it was made in various sizes and of different pitch; (1) as *bass ophicleide* in C,

$B\flat$, and $A\flat$, compass 3 octaves and a semi-tone, chromatically ascending from:  (2) as *alt-ophicleide* in F and $E\flat$, compass the same,  upward; (3) as *but contrabass ophicleide* only in F and $E\flat$, compass only $2\frac{1}{2}$ octaves, pitched an octave lower than the alt-ophicleide. Only the bass ophicleide was for a time in comparatively general use. (RIEMANN.) Now superseded in the orchestra by the bass tuba in $E\flat$.

Opposite motion. Contrary motion.

Oppu're (It.) Or, or else; abbr. *opp.* See *Ossia*.

O'pus (Lat.) A work; abbr. *Op.* or *op.*

Oratorio. (Fr. and It. ditto; Lat. and Ger. *Oratorium*.) An extended composition of dramatic type, for vocal soli and chorus with orchestral accomp., usually having a text based on Scripture. It is distinguished from Opera mainly by the absence of scenic decoration and of stage-play by the performers, the action being contained *implicite* in the words. The oratorio takes its name from the *oratory* in which the monk Neri (d. 1595) held discourses, illustrated by sacred songs, on biblical history; similar productions of a mystical character, and a growing preponderance of the musical element, led up to the first known oratorio employing the *recitative* (E. del Cavaliere's "Anima e Corpo", 1600), which is also a distinctive feature of the opera. At this period oratorios were given with scenery and dramatic action (*azio'ne sacra*); the adoption by Carissimi (d. 1674) of the epical part of the *Narrator*, rendered both superfluous. The modern oratorio, with full orchestra, recitatives, lyrical soli, and the grand choruses (in their solemn and majestic breadth the fundamental characteristic of oratorio-style), is a product of the early 18th century (Haydn, Händel). (Comp. *Mysteries, Passion, Opera*.)—Rubinstein's "geistliche Opern" (sacred operas, *Paradise Lost, Tower of Babel, Moses, Christus*) are also called oratorios, although adapted for stage-performance, for which reason they are playfully termed "Operatorios."

Or'chestra. (Ger. *Orches'ter*; Fr. *orchest-*

tre.) 1. A place reserved (*a*) in the ancient Greek theatre, for the chorus, between audience and stage; (*b*) in ancient Rome, for seats for distinguished personages, in the same place; (*c*) in the modern theatre, for the band of instrumentalists, placed in front of the stage, and either just below the level of the lowest seats in the auditorium, or (as in the Wagner theatre at Bayreuth) sunk still lower, and provided with a half-roof concealing the musicians from the audience. Hence—2. (*a*) A company of musicians performing on the instr.s commonly used in the theatre or concert-hall in opera, in oratorio, etc., or in symphony-concerts; (*b*) the instr.s so played on, taken collectively; as *Wagner's orchestra*, a *symphony-orchestra*.—The orchestral instr.s (compare *Instruments*) are classified in 4 main groups: (1) The *strings* or *string-band* (violin, viola, violoncello, double-bass); (2) the *wood-wind* (flute, piccolo, English horn, oboe, bassoon, double-bassoon, clarinet, basset-horn); (3) the *brass-wind* (French horn, trumpet, trombone, saxhorns, bass tuba, cornet, [ophicleide]); (4) the *percussives* (kettledrums, bass drum, snare-drum, cymbals, triangle, bells, gong, and likewise the harp and pftc., though the latter is not generally reckoned as an orchestral instr.)—The *full orchestra*, in which all the above groups are represented, may be either a *grand orchestra* (*symphony-orchestra*) or *small orchestra*; the former should contain 2 flutes, 2 oboes, 2 clarinets, 2 bassoons, 2 trumpets, 4 horns, 3 trombones, and a pair of kettledrums, to balance which there should be, in the "string-quartet", about 14 1st violins, 14 2nd violins, 9 violas, 9 violoncelli, and 6 double-basses (orchestra of the *Gewandhaus*, Leipzig); this basic grand orchestra may be enlarged *ad libitum* (as for the modern opera) by doubling the principal instr.s or by adding others. On the other hand, by leaving out the trombones, 2 of the horns, and even the kettledrums and clarinets, we get the *small orchestra*.—Groups 2 and 3 constitute what is called the "wind-band".

Orches'tral flute. An organ-stop closely imitating the flute in timbre.

Or'chestrale. (Ger. *orchestrie'ren*; Fr. *orchestrer*; It. *orchestrare*.) To write or arrange music for orchestra... *Or-*

chestra'tion, the art of writing music for performance by an orchestra; the science of combining, in an effective manner, the instr.s constituting the orchestra. [The best treatises on the instr.s and on orchestration are by Gevaert, Berlioz, and Riemann.]

Orchestre. (Fr.) Orchestra... *à grand orchestre*, for full orchestra.

Orchestra'na di ca'mera. One of various small keyboard free-reed instr.s, each constructed with the compass and timbre of some orchestral instrument which it was intended to replace, such as the clarinet, oboe, or bassoon; inv. by W. E. Evans, about 1860.

Orchestra'no. A kind of piano-violin imitating in tone the violin, viola d'amore, and cello; inv. by Pouleau of Paris in 1808.

Orches'trion. The modern *o.* is a large stationary barrel-organ (*q. v.*), generally with a self-acting mechanism, and imitating, by means of a variety of stops, various orchestral instr.s.—The *o.* of the Abbé Vogler (inv. towards the end of the 18th century) was a "simplified" organ, in which the complicated key-action and registers were abolished, the pipes standing directly behind the keys governing them, while the mixtures and numerous other adjuncts were done away with; it also had a Venetian swell, and for the 16-foot stops he substituted a combination of an 8-foot stop and a fifth (5½-ft.)—an idea still of utility.

Ordina'rio. (It.) Common, ordinary... *Tempo o.*, common (4-4) time.

Or'gan. (Lat. *or'ganum*; Ger. *Or'gel*; Fr. *orgue*; It. *or'gano*.) The largest and most powerful among musical instr.s, and of great antiquity, trustworthy accounts reaching back to the 2nd century B. C. Up to the 10th century A. D. the organ appears to have been a very primitive instr., with a diatonic compass of 2 octaves at most; the pipes were all flue-pipes, constructed in much the same manner as at present; reed-pipes were not introduced until the 15th century. But as early as 980 we hear of an organ at Winchester, England, which had 400 pipes and 2 manuals, each with a compass of 20 keys, and with 10 pipes to each key. The keys of the early organs were so broad, and the whole action so clumsy, that in

playing the plain-song melodies the clenched fists, or even the elbows, were used to depress them. Improvement has been steady, and chiefly due to German, English, and French organ-builders.—The *pipe-organ* (see also *Reed-organ*) is a keyboard wind-instr. consisting of few or many sets of pipes controlled by one or more keyboards. It has 3 distinct mechanisms: (1) The *wind-supply*, incl. bellows, windtrunk, windchest, etc.; (2) the *pipes*, called collectively the *pipe-work*; (3) the *keyboards*, *pedals*, and *stops*, called collectively the *action*, and under the player's direct control.—(1) The wind (compressed air) is obtained from a weighted *storage-bellows* filled by *feeders*; from the storage-bellows the wind is driven, by pressure of the weights on the storage-bellows, through a hollow wooden canal, the *windtrunk*, into the *windchest*, a wooden wind-reservoir beneath the *soundboard* on which the pipes are set; the wind passes up through the soundboard by way of *grooves* separated by *bars*, and leading directly to the pipes; the grooves are closed below by *pallets* (air-tight valves) opened by depressing the keys, and above by *sliders* opened by pulling out the draw-stops.—(2) The pipes are divided into 2 principal groups, *flue-pipes* and *reed-pipes* (which see; also comp. *Stop*). They are held in position over the soundboard by the *upper-board*, into which the *noses* of the pipes are inserted, and the *pipe-rack*, a board pierced with holes to admit the *feet* of the pipes and to support the latter. Each set of pipes (a *stop* or *register*) is ranged in one or more rows above a *slider*, which is a long, narrow strip of wood with holes corresponding in size and relative position to those in the feet of the pipes, and pushed back and forth by a *draw-stop*; when the latter is *on* (out, or drawn) the slider-holes come exactly under the pipe-feet, so that wind can pass from the grooves into the pipes; when the draw-stop is *off* (i. e. in) the slider-holes are out of position, and the pipes cannot speak.—(3) The *action*: (a) The *draw-stop action* is that acting upon the sliders by means of a system of levers; combination-pedals (see *Pedal*) are compound draw-stops... (b) The *keyboard-action* acts upon the pallets closing the grooves; when a key is depressed, its rear end rises, forcing up

an upright wooden wand called a *sticker*, which raises the front end of a horizontal lever called a *backfall*, whose rear end in turn goes down, and pulls with it a *tracker*, a thin, vertical strip of wood bearing on its upper end the *pull-down* or *pallet-wire*, a wire attached to a *pallet* (valve) closing the lower side of a *groove*; this pull-down thus pulls down the pallet and admits the compressed air to the groove from the windchest; if a draw-stop is on, so that the wind can enter a pipe, the pipe will speak which corresponds to the key depressed. This is a common variety of key-action; *squares* and *roller-boards* are also often interposed between the stickers and trackers; more recent inventions are the *pneumatic* and the *electric actions*, in which the depression of a key simply forms a connection setting the compressed air or electric current at work. . . (c) *Couplers* are mechanical stops acting to connect 2 manuals, or pedal with manual, so that when one is played on, the other is combined with it. A 4-manual organ often has as many as 8, namely, 4 *manual-couplers* (Ch. to Gt.,

Sw. to Gt., Solo to Gt., Sw. to Ch.), and 4 *pedal-couplers* (Gt. to Ped., Ch. to Ped., Sw. to Ped., Solo to Ped.) The organ-keyboards are usually called *manuals*; there may be from 1 to 5 (see list below) with or without *pedal-keyboard*. Usual compass of manuals, 4 octaves and a fifth, with 56 keys (sometimes 5 full octaves), from *C* to *g*³:

This notation, however, expresses only a part of the full compass, the lowest pedal-pipes (yielding *C*₂ (2 octaves below and the highest manual-pipes (piccolo 1-foot) producing *g*⁶ (3 octaves higher than the total compass of the organ thus being 9 octaves and a fifth (*C*₂ to *g*⁶)).—The stops belonging to each manual are set on a separate sound-board or set of soundboards, and constitute a *partial organ*.—The names of the manuals follow:

It is ordinarily a bass note (usually the tonic or dominant, or even both combined), and is also called a *pedal-point*, or *pedal*; but a tone so sustained in a higher part is more properly termed a *holding-note*, or simply a *sustained tone*, and the organ-point is then sometimes termed *inverted*.—*Pastoral organ-point*, tonic and dominant sustained together in the bass.

Organum (Lat.) 1. An instrument; later, an organ.—2. The earliest attempts at harmonic or polyphonic music, in which the parts progressed in parallel fifths and fourths. The excruciating effect of this diaphony in the modern ear has led investigators to make the most of any historical evidence going to show that these progressions were not simultaneous, but of an antiphonal character; it appears to be established, however, that they were really the connecting link between the earlier chanting in octaves, and the later contrapuntal forms slowly developed out of the oblique and contrary motion in certain forms of the *organum*, due to the occasional introduction of harmonic seconds and thirds.—Though the *organum* was, properly, the part added below the *cantus firmus*, the term is generally applied to all the first rude attempts at harmonic composition, whether in 2 parts (*diaphonia*), 3 parts (*triphonia*), the added third part being called *triplum*,

whence our *treble*), or 4 parts (*tetraphonia*). The examples are quoted from

O'verture. (Ger. *Ouvertüre*; Fr. *ouverture*; It. *overtura*, *sinfonia*.) A mus. prelude or introduction. The first Italian *opera-ouvertures* were simple vocal (sung) prologues, or instrumental preludes in vocal (madrigal-) style; with Scarlatti the *overture* or *sinfonia* assumed a purely instrumental character, and was written in three divisions (I allegro, II slow, III vivace, presto); hence the *overture in sonata-form*, with 2 or 3 contrasting themes following a short and slow introductory passage, and repeated after a more or less extended development-section, but differing from the true sonata-form in lacking the characteristic reprise before the development. This overture in sonata-form is the parent both of the modern Symphony and of the *Concert-overture* (a term derived from the custom of performing real opera-ouvertures as separate concert-pieces), in which latter the above form is usually adhered to.—*Opera-ouvertures* not in this form are either *potpourris* of leading mus. numbers taken from the body of the work, or *preludes (symphonic poems)* treating and blending themes occurring in the musical drama in the form of an independent composition, with the intention of preparing the hearers for the coming action; such preludes have neither a regular key-plan, nor any conventional formal method of construction.

Part-song. A composition for at least 3 voices in harmony, without accomp., [and for equal or mixed voices].—The first requisite of the music is well-defined rhythm, and the second unyielding homophony. . . Tunefulness in the upper part or melody is desirable, and the attention should not be withdrawn by elaborate devices of an imitative or contrapuntal nature in the harmonic sub-

structure... The part-song being essentially a melody with choral harmony, the upper part is in one sense the most important... The words may be either amatory, heroic, patriotic, didactic, or even quasi-sacred in character... The part-song... is one of three forms of secular unaccompanied choral music, the others being the madrigal, and the glee... Like the madrigal and unlike the glee, the number of voices to each part may be multiplied within reasonable limits. [GROVE.]

Passion, Passion-music. A musical setting of a text descriptive of Christ's sufferings and death (passion). Its beginnings are traceable back to the 4th century; the oldest music extant is a solemn plain-song melody of uncertain date (*can'tus passio'nis*). In a quasi-dramatic form the passion is of later origin; and possibly directly derived from the ancient custom of chanting the scriptural text of the passion, during passion-week, to Gregorian melodies. It is certain, that from early in the 13th century (1) the words spoken by Christ, (2) the connecting narrative, and (3) the exclamations of the apostles, the populace, the high priest, etc., were recited by 3 different singers (impersonating Christ, the Evangelist, the Disciples, etc.) The evolution of the Passion as an art-form is, after the 16th century, nearly parallel with that of the *Oratorio* (which see); from its resemblance to the latter it is sometimes styled "passion-oratorio". It differs from it, however, by a distinct infusion of an element of pious contemplation and subjective emotion, expressed in hymns of praise and choral songs, devotional arias and choruses. The crowning work of this kind is Bach's "Matthäuspasion" (Passion according to St. Matthew).—The full dramatic form of the Passion, with stage-setting and dramatic action, still survives in the German Passion-plays at Oberammergau.

It is *single-acting* when it only draws out new stops in addition to those already drawn, or pushes in some of the latter; and *double-acting*, when it always produces the same combination, whatever stops were or were not previously drawn. Comb.-pedals are of 3 kinds: (1) The *forte pedal*, drawing all the stops of its keyboard; (2) the *mezzo pedal*, drawing the chief 8-foot and 4-foot stops of its keyboard; and (3) the *piano pedal*, pushing in all but a few of the softest stops...*Composition-pedal*, a combination-pedal...*Coupler-pedal*, see *Pedal-coupler*...*Crescendo-pedal*, a pedal mechanism drawing all the stops successively up to "full organ". Phonau'tograph. An electric music-recorder for keyboard instr.s, inv. by Fenby, in which a stud attached under each key makes an electric connection when the key is depressed, and thus marks, on paper, lines corresponding in length to the duration of the notes. . . Another, inv. by the Abbé Moigno, records the tones (sounded or sung) by the aid of a pencil fitted to a sort of drum, the membrane of which vibrates to the tones.

Phone. §1. It forms no part of a compiler's work to introduce new words on his personal responsibility; but the terms "tone", "clang", and "sound" being already appropriated, a distinctive and exact equivalent had to be employed in rendering the German "Klang" as used in modern musical theory. The Greek word *φωνή*, in the English form *phone*, appeared to be a fairly acceptable neologism.—A *phone*, then, will be understood as signifying not only a tone with its overtones and undertones (Tyndall's "clang"), but specifically the *major triad* (generator and *higher* partials [2] 3 [4] and 5) or *over-phone*, and the *minor triad* (generator and *lower* partials [2] 3 [4] and 5) or *under-phone*. [N.B. Over-phone and under-phone are also called *over-chord* and *under-chord* respectively.—In the subjoined statement of the modern theory of chords, RIEMANN is followed.]

§2. There can be no doubt, that the consonance of the major triad (major consonance) is referable to the series of higher partials (see *Acoustics*), i. e. that a major triad, however the tones may be set or inverted, is to be conceived as a consonance in which certain higher

partials of the root are reinforced by actual tones. E. g.,

Moreover, the generator accompanying each phone represented above, is always present as a resultant tone. But the series of partials not only completes itself *downwards* to the generator by means of the resultant tones, but continues itself *upwards* by the aid of the upper partials of the primary overtones. Those overtones, above the 8th, which are represented by composite numbers ($9=3 \times 3$, $15=3 \times 5$, etc.), are conceived as *overtones of overtones* (*secondary overtones*); i. e. as integral constituents of the *primaries* (the 9th overtone as the 3rd of the 3rd primary, the 15th as the 5th of the 3rd primary, etc.), and, sounded as notes of an actual chord, appear as *dissonances*; that primary overtone, whose overtones they are, has the character of a *generator*, 2 over-phones thus being simultaneously represented. Only the ratio of the octave (2:1) is never dissonant. Striking out from the series of overtones the doublings in the octave, there remain, to represent the major consonance of the over-phone, only (1) the *generator*, (2) the *twelfth*, and (3) the *fifteenth*; hence, the primitive form of the major triad is not, properly speaking, the triad in close harmony: but the open triad: har-mony:

—The consonance of the minor triad is not derivable from the series of higher partials, but is referable to a series of lower partials (undertones) diametrically opposed to the former (comp. *Acoustics*). The lower partials 1, 2, 3, 4, 5, 6, 8, 10, 12, 16, etc., in fact all tones of the lower series corresponding to lower octaves of the 1st, 3rd, and 5th lower partials, are constituents of the minor triad below c, of the C under-phone: in just the same sense as the same numbers in the higher series are constituents of the its dissonances also Cover-; have a parallel explanation.

§ 3. PHONIC REPRESENTATION (*Klang'vertretung*) is the peculiar significance attaching to any tone or interval, according as it is conceived as belonging to a particular phone. For instance, the tone *C* has a very different meaning, in the logic of progression, when conceived as *terce* in the *A* \flat -major chord, from that as *terce* in the *A*-minor chord; in the former case, it is most closely related to *D* \flat and the *D* \flat -major chord; in the latter, to *B*, and the chords of *E*-major and *E*-minor. Every tone may form an integral part of 6 different phones; for instance, the tone *C* in the *C* over-phone (*C*-major chord) as major root, in the *F* over-phone as major quint (over-quint), in the *A* \flat over-phone as major *terce* (over-*terce*), in the *C* under-phone (*F*-minor chord) as minor root, in the *G* under-phone (*C*-minor chord) as minor quint (under-quint), and finally in the *E* under-phone (*A*-minor chord) as minor *terce* (under-*terce*):

Major chords
(read up).

Minor chords
(read down).

Whenever the tone *C* enters into any other chord as a dissonant tone, or is substituted for some chord-tone as a suspended or altered tone, it is nevertheless always to be conceived as belonging to one of the above 6 phones, i. e. to the one most nearly related in any given case.

§ 4. THE RELATION OF TONES is a modern conception, based on the affinity of tones belonging to the same phone. Tones belonging to the same phone are directly related; to *c*, for instance, are directly related *g*, *f*, *e*, *a* \flat , *a*, and *a* \sharp ; for *c*: *g* belongs to the chord of *C*-major or *C*-minor, *c*: *e* to the chord of *C*-major or *A*-minor, *c*: *a* \flat to the chord of *A* \flat -major or *F*-minor, *c*: *a* to the chord of *F*-major or *A*-minor, and *c*: *a* \sharp to the chord of *A* \flat -major or *C*-minor. Directly related tones are consonant; all other, or indirectly related, tones are dissonant. The mutual relation of the former is more easily understood than that of the latter. Directly related phones are (1) those similar ones (both either major or minor) in which the phonic root of the one is directly related to the phonic root of the

other [phonic root = generator, i. e. the fundamental tone in a major triad, or the quint in a minor triad]; (2) those dissimilar ones (one major and the other minor) of which the one is the under-phone of some chord-tone of the other; namely, for the major chord, the under-phones (*minor phones*) of its phonic root, quint, and *terce*; for the minor chord, the over-phones (*major phones*) of its phonic root, quint, and *terce*; to which must be added the under-phones of the respective leading-tones. Thus, the following chords are directly related to the *C*-major chord:—*G*-major, *F*-major, *E*-major, *A* \flat -major, *E* \flat -major, *F*-minor, *C*-minor, *A*-minor, and *E*-minor; whereas, to the *A*-minor chord, are directly related the chords of:—*D*-minor, *E*-minor, *F*-minor, *C* \sharp -minor, *C*-minor, *F* \sharp -minor, *E*-major, *A*-major, *C*-major, and *F*-major.—The relation of the tones depending on that of the tonics (tonic phones), it follows, that any key is directly related to *C*-major (or *A*-minor), whose tonic is one of the phones (chords) given above as directly related to the chord of *C*-major (or *A*-minor).

§ 5. PHONIC PROGRESSION (*Klang'folge*) is the progression between two chords with reference to their significance as phones. The ordinary method of marking the phones (major and minor triads) by the Roman numerals I, II, III, IV, etc. (comp. *Chord*) is inadequate from the standpoint of free tonality; e. g. this passage:

C: I V⁷ I
f: V III
 c: VI
 G: V⁷

is hardly intelligible with such a figuring; although it in no way signifies a modulation into another key, one must perforce consider the *A* \flat -chord as in *f*-minor, and the *D*-chord as in *G*-major. For such progressions, a figuring with reference to a scale is simply impossible; they are referable to *free tonality*, an idea but recently recognized, whose scope extends far beyond the bounds of diatonic harmony. Tonality

knows neither diatonic nor foreign chords, but only a *tonic phone* and *referable* (related) *phones*. In the above example, the *C*-major triad is through-out the tonic phone, to which the others are referable; the *A* \flat -major chord is its under-terce phone, the *D*-minor chord is its second over-quint phone, and the *G*-major chord its over-quint phone. The first progression (*C*-major to *A* \flat -major) reaches over to the undertone side; the second (*A* \flat -major to *G*-major) springs across to the overtone side; the other two lead back to the tonic phone. If we term a progression between 2 similar phones a *stride* (*Schritt*), and one between 2 dissimilar phones a *change* (*Wechsel*), we can distinguish 4 species of phonic progression in which the mutual relation of the roots is a quint-relation. It is of widely different significance for the tonality, whether a stride from the tonic goes to overtone side or to the undertone side; starting from a major chord the *latter*, and from a minor chord the *former*, signifies a contradiction of, or opposition to, the phonic principle; strides or changes to *contraphones* (i.e. phones belonging to the opposite side) will be indicated by the prefix *contra*. Thus (1) the progression from *C*-major to *G*-major, or *A*-minor to *D*-minor (= *E* under-phone to *A* under-phone) is a simple quint-stride; (2) *C*-major to *F*-major, or *A*-minor to *E*-minor (*E* under-phone to *B* under-phone) is a contraquint-stride; *c*^o*g*, or *o*^o*e*-*a* (see § 6), is a simple quint-change; *c*^o*f*, or *o*^o*e*-*b*, is a contraquint-change. In all species of phonic progression the simple changes are, like that above, easily intelligible; whereas the contra-changes are much more difficult to understand.—The tierce-progressions are, for example, the simple tierce-stride *c*-*e*, or *o*^o*e*-*c*; contratierce-stride, *c*-*a* \flat , or *o*^o*e*-*g* \sharp ; simple tierce-change, *c*^o*e*, or *o*^o*e*-*c*; contratierce-change, *c*^o*a* \flat . Any direct progression to a remoter phone makes the want of an (omitted) connecting link sensibly felt; it will be easy to *modulate* to such an intermediate phone, i.e. to transfer to it the significance of a tonic phone.

§ 6. PHONIC FIGURING (*Klang-schlüssel*) [according to RIEMANN]. (1) No scale-degrees are marked or taken note of; small letters are used to mark the root-tones of the phones, with an ^o prefixed for an under-phone; thus *c* =

C-major triad, ^o*c* = *F*-minor triad.—(2) To these letters are affixed numerals, marking intervals added to the phones; not, however, counting from the bass note, but from the phonic root; Arabic numerals [read up !] for over-phones (major triads), Roman numerals [read down !] for under-phones (minor triads). Thus 1 (I) = phonic root; 2 (II) = major second; 3 (III) = major tierce; 4 (IV) = perfect quart; 5 (V) = perfect quint; 6 (VI) = major sext; 7 (VII) = major sept.—(3) The sign < after a numeral denotes the raising of the interval by a semitone; > denotes its lowering by a semitone. Examples :

The image shows two musical staves in G major. The first staff contains five chords: G7, F7, Bb6 (or D6), G7 with a semitone-raising sign (<), and Bb6 with a semitone-lowering sign (>). The second staff contains five chords: D6 with a semitone-raising sign (<), Eb6 with a semitone-raising sign (<), F5 with a semitone-raising sign (<), F5 with a semitone-lowering sign (>), and Bb6 with a semitone-lowering sign (<). Below the second staff, smaller notation indicates I<, G7, and G7.

Pian'oforte. (Ger. *Klavier'* [in Ger. *Pianofor'te* usually means "square

piano"]; Fr. *piano* [more rarely *pianoforté* or *forté-piano*, very seldom *forté*]; It. *pid'no*, *pianofor'te*.) A keyboard stringed instr. of percussion, the tones being produced by hammers striking the strings.—The principal parts are (1) the Frame, (2) the Soundboard, (3) the Strings, (4) the Action, and (5) the Pedals.—According to the shape of the case, pftes. are classed as GRAND (harp-shaped; Ger. *Flügel*; Fr. *piano à queue*; It. *pid'no a co'da*), with horizontal strings and built in several sizes, as *Concert Grand*, *Parlor Grand*, *Boudoir*; —SQUARE (oblong; Ger. *Pianofor'te*, or *ta'felhörniges Klavier'*; Fr. *piano carré*; It. *pianofor'te a tavoli'no*) with horizontal strings; —and UPRIGHT (buffet-shaped; Ger. and It. *Piani'no*; Fr. *piano droit*) with vertical or slanting strings.

(1) The *Frame* is now generally of iron cast in one piece (Broadwood's pftes. form the most notable exception to this rule), and braced with *cross-bars* and *trusses* to resist the string-tension, which varies from about 12 up to nearly 20 tons.—(2) Below the frame is the *Soundboard*, near the front end of which is a *bridge* of hard wood over which the strings are stretched.—(3) The *Strings* are attached at one end by *hitchpins* to the *stringplate*, and at the other to *wrestpins* (*tuning-pins*) set in the *wrest-plank*; they are of steel wire, the bass strings of a steel core covered (coiled) with copper wire; 8 or 10 of the lowest bass tones have one string, about 1½ octaves above have 2 strings, and the remaining 5 octaves 3 strings, to each tone; such pairs or triplets of strings to one tone are called *unisons*.—(4) The *Action* consists essentially of the *key* (*digital*, *finger-lever*); the *hopper* on the rear end of the key, raising the hammer when the key is depressed, and allowing the instant escape of the latter after propelling the hammer, which can therefore immediately rebound into position after striking the string; the *hammer*, hinged at the *butt*, with a slim round *shank*, upon which is fixed the *head* (the hammer proper) made of felt and sometimes covered with leather.—(5) The *Pedals* are 2 (sometimes 3) in number: (a) *Damper-pedal*, (b) *Piano pedal*, (c) *Sustaining-pedal* (comp. art. *Pedal*).

The idea of the *key-mechanism* was derived indirectly, through the mono-

chord, spinet, harpsichord, and clavichord, from that of the organ; the idea of a *hammer-action* (which constitutes the essential difference between the Pianoforte and its precursors) was, perhaps, derived from the dulcimer in its perfected form the *Pantolon*. The hammer-action was first *practically* developed by Bartolommeo Cristofori of Padua in 1711, whose action is the same, in essentials, as that now manufactured by Broadwood (English action).

Piano-violin. (Ger. *Bo'genflügel, Geigenwerk*; Fr. *piano à archet, piano-quatour*.) The English name covers the results of a long series of experiments, and of improvements of the hurdy-gurdy, the prototype of the class.—In the *Geigenwerk* inv. by Heiden of Nuremberg (about 1600) the keys, when touched, pressed their corresponding wire strings against small rosined wheels made to revolve by a treadle; the tone was similar to that of a bow-instr.—The *Gambenwerk* was made by Risch of Ilmenau (about 1750), and improved by the substitution of gut strings for wires.—Hohlfeld's *Bogenflügel* (1754) had gut strings, beneath which was a bow furnished with horsehair; on pressing the keys, the strings were drawn by little hooks against the bow, whose slow or rapid movement was controlled by a pedal-stop.—C. A. von Meyer, of Knownow, provided a separate horsehair bow for each string (1794).—The *clavecin harmonique* of Hübner (Moscow, about 1800) accurately reproduced the sound of a string-quartet.—Pouleau's *orchestrine* was a further improvement of the *clavecin harmonique*.—H. C. Baudin of Paris invented an instr. called the *piano-quatour*, patented in England in 1865 under the name of *piano-violin*. It has for each tone one wire string, at or near a nodal point of which is attached a piece of stiff catgut projecting about an inch. Above these gut ties, a rosined roller is caused to revolve rapidly by a treadle; on touching the keys, these ties are carried up against the roller, the tones thus produced having the timbre of tones from gut strings. The instr. is capable of rapid execution and articulation.

Pipé. 1. A primitive wind-instr., a rude flageolet or oboe.—2. An organ-pipe. (Ger. *Orgelpfeife*; Fr. *tuyau d'orgue*;

It. *can'na d'or'gano.*) (a) FLUE-PIPES are those in which the tone is produced by the vibration of a column of air within a tube or "body", the vibration being set up by an air-current forced through a narrow aperture and impinging on a sharp edge. A flue-pipe may be of metal or wood; the part resting on the pipe-rack is the *foot*, which is divided from the *body* by an aperture in front called the *mouth*, having an upper and a lower *lip*, and *ears* on either side; within the mouth a projecting shelf or ledge called the *block* (when thick) or *language* (when thin) deflects the wind rushing through the foot, forming below a channel called the *throat*, and above (between language and lower lip) a narrow passage called the *windway*; the wind passing out of the latter impinges on the sharp edge of the *leaf* (bevelled portion of the upper lip), setting the air-column within the body in vibration and thus producing a tone. The body of an open metal pipe is provided at the top with flaps called *tuners*, that of a wooden pipe with small movable wooden boards, by adjusting which the pipes can be tuned—"voiced".—Flue-pipes are *open* or *covered* (stopped, plugged); an *open pipe* produces a tone proportioned in pitch to the length of the body, hence the terms 8-foot tone, 16-foot tone, etc. (Compare *Harmonic stop.*) A *stopped pipe* yields a tone an octave lower than an open pipe of like length.—(b) REED-PIPES are those in which the tone is produced by a reed; the tone may be modified in quality, but not in pitch, by the shape and size of the body or tube. A reed-pipe has a *boot* (corresponding to the *foot* of a flue-pipe), within which is the *block*, a circular plate of metal with 2 apertures, one holding the *tuning-wire* and the other the *reed*. A *reed* consists of 2 parts, a metal tube (called the *shallot*) of conical form, widest below, with a

lengthwise opening along one side covered by the *tongue* (the vibrating reed proper), an elastic strip of metal made fast at the top, but free below to vibrate; across its upper portion passes the bent end of the *tuning-wire*, which can be raised or lowered so as to allow a longer or shorter part of the tongue to vibrate, and thus alter the pitch. The tube is fixed above the block, and may be of metal or wood, and in very various forms.

Pipe-metal. The metal of which the metallic flue-pipes in the organ are made; generally an alloy of tin and lead, the tone improving as the proportion of tin increases. Pure tin, lead, or zinc, or all 3 in varying proportions, have also been used.

Pipe-organ. See *Organ*.

Piston. See *Valve*.

Piston-Solo (Ger.) Solo for the *cornet à pistons*.

Pitch. (Ger. *Ton'höhe*; Fr. *hauteur du ton*; It. *diapason*.) The position of a tone in the musical scale.—Pitch is relative, or absolute. The *relative pitch* of a tone is its position (higher or lower) as compared with some other tone. (See *Interval*.) Its *absolute pitch* is its fixed position in the entire range of musical tones.

§ I. For ordinary purposes the musical scale is divided, to indicate *absolute pitch*, into a fixed series of octaves, which are named and lettered, in English usage, as follows:

NAMES OF THE OCTAVES IN ABSOLUTE PITCH.

Double contra-octave (32-foot octave, organ)	Contra-octave (16-foot oct.)	First octave (Great octave) (8-foot oct.)
C ₂ D ₂ E ₂ F ₂ G ₂ A ₂ B ₂	C ₁ D ₁ E ₁ F ₁ G ₁ A ₁ B ₁	C D E F G A B

NOTE.—The double contra-octave is often written CCC, DDD, etc., and the contra-octave CC, DD, etc.; also, instead of small figures, accents or lines are employed to mark the letters, as C_{11} D_{11} or $\tilde{C} \tilde{D}$ for $C_2 D_2$ etc.;— $c' d'$, or $\bar{c} \bar{d}$, for $c^1 d^1$ etc.;— $c'' d''$, or $\bar{\bar{c}} \bar{\bar{d}}$, for $c^2 d^2$ etc.;—hence the terms *one-lined octave*, *two-lined octave*, and *once-accented octave*, *twice-accented octave*, etc.

§ 2. For scientific purposes, and to ascertain the *relative* pitch of the tones of the scale, the above system is modified, *C* being retained as the starting-point or standard tone, while the distinction between lower and higher octaves is disregarded, and lines (in this case not marking different octaves) are drawn above or below the letters to distinguish between *Quint-tones* (i. e. tones whose relative pitch is determined by reaching them through ascending or descending, from the standard tone *C*, by skips of successive perfect fifths), and *Tierce-tones* (i. e. tones determined by reaching them through skips of major thirds). For instance, the tone *e* may be reached either as the fourth quint above *C* (C-G-D-A-E), or by ascending

one tierce to *e*; in the former case *E*, as the third of *C*, is a *quint-tone*, whereas in the latter case it is a *tierce-tone*, the difference in pitch being noted by a line under the tierce-tone *E*, signifying that it is lower than the quint-tone *E* by a syntonic comma (80:81). This syntonic comma represents the ratio between the Pythagorean tierce of *C* (=E, the fourth quint), and the major tierce of *C* (=E) of just intonation (E : E :: 80 : 81); for every tierce-skip taken upward, a line is added below the letter, and for every tierce-skip downward, a line is added above the letter; showing by how many commas the tierce-tone obtained is lower or higher than the corresponding quint-tone.

In this Table each skip horizontally is a quint-skip, and each skip vertically is a tierce-skip; the major triads are grouped thus, $\frac{c}{a\flat} \frac{e\flat}{g}$ and the minor triads thus $\frac{c}{e\flat} \frac{g}{a\flat}$.

In just intonation the major scale would be represented thus:

C D E F G A B c

and its parallel minor scale thus:

C D E \flat F G A \flat B c

§ 3. The absolute pitch of a tone is determined by the number of vibrations it makes per second, and is stated as a *vibration-number*. The standard French pitch, universally adopted in France in 1859, gives the tone a^1 435 (double) vibrations per second, c^2 having 522. Formerly there was no recognized standard, the pitch varying in different instr.s (organs) and localities by as much as a fourth. The inconveniences resulting led to the establishment, early in the 17th century, of a mean pitch (a^1 averaging about 420 vibrations), which held its own for some 200 years; this has been called the *classical pitch*, it having obtained throughout the era of classical composition. After this, the growing tendency to force the pitch upwards led to numerous deliberations by scientists and musicians; the German congress at Stuttgart adopted the pitch $a^1 = 440$; but the French pitch mentioned above is, in point of fact, the only real standard, and, since its formal adoption by the Vienna Congress in Nov., 1887, is frequently termed the *international pitch*. It is called *low pitch*, as opposed to the *high pitch* (*concert-pitch*) in vogue till lately in concerts and operatic performances. The so-called *philosophical standard of pitch* is obtained by taking, for Middle-C, the nearest power of 2, giving 256 vibrations for c^1 , and nearly 427 for a^1 ; it has frequently served as a basis in theoretical calculations.

Pitch-pipe. A small metal or wooden reed-pipe producing, when blown, one or more tones of fixed pitch, according to which an instr. may be tuned, or the correct pitch ascertained for the performance of a piece of music.

Plain chant, Plain song. (Lat. *can'tus pla'nus, cantus chora'lis*.) The unisonous vocal music of the Christian Church, probably dating from the first centuries of the Christian era, the style being still obligatory in the R. C. ritual. Handed down at the beginning by oral tradition, it was first regulated by St. Ambrose (see *Ambrosian chant*), and later revised by St. Gregory (*Gregorian chant*). The comparatively modern name *cantus planus* distinguished this style from that of the strictly rhythmical *cantus mensura'bilis*, which originated early in the 12th century, after which period plain chant began to be sung in notes of equal length; in its earlier form, however, the tone-values of plain chant were determined by rules very similar to those for poetical metre. Just as a poem consists of lines, the lines of feet, and the feet of 2 or more syllables, a melody was divided into so-called *distinctions* consisting of a more or less extended group of *neumes* (notes), a distinction being in turn divided into single *neumes* (single notes), each *neume*, finally, representing one or more *tones*. Thus a metrical *line* corresponded to a musical *distinction*, a metrical *foot* to a musical *neume*, and a *syllable* to a *tone*. (Comp. *Notation*, § 3.)

The first recitatives had a very simple accompaniment, a mere figured bass (*recitativo sec'co*); this broadened into the *recitativo accompagna'to* (or *obbligato, stromenta'to*; Fr. equiv. *obligé, accompagné*), in which the instrumental parts were invested with more life, variety, and musical importance.—Unless marked *recitativo a tempo*, the recitative may be performed *ad libitum*. The connecting-link between the *rec.* of the opera and oratorio and the *A'ria* is found in the *Ario'so*.—*Wagner's rec.* differs from the earlier forms in the perfectly natural musical inflection of the vocal part (the ancient cadences, etc., being abolished), and the richly instrumented and marvelously pregnant accompaniment (comp. *Melos*).

A thin strip of cane, wood, or metal, so adjusted before an aperture as nearly to close it, fixed at one end, and set by an air-current in vibration, which it communicates either to an enclosed column of air (organ-pipe, oboe, etc.), or directly to the free atmosphere, thus producing a musical tone. There are 2 classes of reeds, (1) *Free Reeds*, which vibrate within the aperture without striking the edges; and (2) *Beating* (or *striking, or percussion*) *Reeds*, which strike on the edges; in either class, the elasticity of the reed causes its return-stroke after it is borne down by the air-current.—*Double Reed*, two beating reeds which strike against each other (oboe, bassoon). (Also comp. *Pipe 2, b, Reed-organ, Regal*.)

Reed-instrument. One whose tone is produced by the vibration of a reed in the mouthpiece; the orchestral instr.s of the oboe and clarinet groups.

The present reed-organs have free reeds; there are 2 principal classes: (1) The *Harmonium*, the bellows of which forces compressed wind outwards through the reeds; and (2) the *American organ*, in which an exhaust or suction-bellows draws the air in through them. Until the invention of the *Vocalion*, a variety of reed-organ having compression-bellows like those of the harmonium, the tone of the second class was generally superior to that of the first.—The wind-supply is ordinarily obtained by the aid of a pair of

treadles operated by the performer. There may be one or many sets of reeds or vibrators, each controlled by a stop and slider-mechanism. The timbre of the various orchestral instr.s is now very successfully imitated.—Common mechanical devices are the *percussion-stop*, *expression-stop* (harmonium), *kneeswell* (Amer. org.), *tremulant*, *double-touche*, and *prolongement*.—The first reed-organ was invented by Grénié in 1810, and named by him *orgue expressif* on account of the *crescendo* and *decrescendo* obtainable on it; other inventors constructed the *æoline*, *æolodikon*, *phys-harmonica*, etc.; the *Harmonium*, the first instr. of the class having several stops, was patented in Paris by A. Debain in 1843.

Rhythm. (Ger. *Rhyth'mus*; Fr. *rythme*; It. *rit'mo*.) 1. The measured movement of similar tone-groups; i. e., the effect produced by the systematic grouping of tones with reference to regularity both in their accentuation and in their succession as equal or unequal in time-value.—A Rhythm is, therefore, a tone-group serving as a pattern for succeeding groups identical with it as regards the accentuation and duration of the tones. The rhythm, being thus a thing apart from tonal melody or harmony, is reducible to a formula of notes without pitch, merely representing an orderly series of pulsations; take, for instance, the castanet-rhythm of 3 Spanish national dances:

The vertical bars divide the *measures*; the slurs connect notes forming one *rhythmic group* or *rhythm*. The difference between a *measure* and a *rhythm* is apparent; the former is the sum of the time-values of notes (or rests) between 2 bars, whatever be their arrangement; the latter *may* be contained (1) within a measure, but at (2) embraces 2 measures, and at (3) begins before the bar.—*Time*, on the other hand, is the division of each measure into equal fractional parts of a whole note, corresponding (at least in the simple times) to the same number of regular beats to a measure; with which regular beats the pulsations of the rhythm are by no means required to coincide.—It must be added, however, that the above definitions are not universally accepted, and that great confusion prevails in this department of English mus. terminology, as in others; they are given simply as valid for this Dictionary.—2. Rhythm, in a wide sense, is the accentuation marking and defining *broader mus. divisions* in the flow and sweep of a composition by *special emphasis at the entrance or culminating points of motives, themes, phrases, passages, sections*, etc. (Comp. *Accent 2*.)

Romance. (It. *roman'za*; Ger. *Roman'ze*.) Originally, a ballad, or popular tale in verse, in the Romance dialect; the name, being later transferred to stories of love and knightly adventure, which were often set to music, has been employed in modern times as the title of epico-lyrical songs, and, by further transference, of short instru-

mental pieces of a sentimental or romantic cast, and without definite form (see *Ballade*).—The French *romance* is a simple love-ditty expressive of tender melancholy; *Romances sans Paroles* are "Songs without Words."

Romane'sca (It.) The Italian form of the Galliard, so called because coming from Rome.

Romantic. The opposite of *classic* (which denotes an accepted and comprehended type, in which form and spirit blend to form an harmonious whole). *Romantic* was an epithet originally derived from Romance poems of the early middle ages, and applied to very various products of a lively, gloomy, or heated imagination down to the German revival of Romantic literature during the 18th century. All late romantic poems having something of exalted mysticism, visionary enthusiasm, or strong subjective and sentimental emotion of an uncommon type, the term *romantic* was naturally transferred to composers and their works that depart from the beaten track, and aim at expressing emotion in a style and with means differing from those employed by their predecessors. Thus, old forms are broadened, new forms and types created, and also many eccentric and ill-conceived productions brought to light. Hence it comes, too, that the *Romanticists* of to-day are the *Classicists* of to-morrow; that Haydn and Mozart, — Beethoven, — Weber, Chopin, and Schumann, — Berlioz, Liszt, and Wagner, — are all in turn decried, listened to, tolerated, admired, worshipped, — and imitated. And the imitators of original genius are simply post-classicists, who, in full accord with the form and mode of expression employed by their models, seek to elaborate and finish both in a manner suited to their own needs. It might be said, that any great original composer remains a romanticist until he is thoroughly understood. Berlioz, Liszt, Wagner and their following are generally classed as the neo-romantic school.

which, a return of the leading theme, is derivable from the construction of the old French poetical form of the *rondeau*. While in the earlier rondos the digressions from the 1st theme were of an irregular and desultory character, the episodes of the modern form assume the shape of well-defined contrasting themes, somewhat in the following order: I-II (dominant)—I-III-I-II (tonic)—Coda. It is an "omnibonic" (chromatic) instr., with a mellow and penetrating tone of veiled quality partaking of that of the clarinet, *cor anglais*, and violoncello, but very sonorous, and of remarkable homogeneity in all registers and sizes; 6 principal sizes are made, at intervals of a fourth and fifth apart, each size

Saxhorn. A brass wind-instr. inv. in 1842 by Adolphe Sax, a Belgian. It is essentially an improved key-bugle or ophicleide, having from 3 to 5 valves instead of keys. Saxhorns are constructed in 7 different sizes, forming a complete series alike in timbre and method of playing, and named according to their fundamental tone or their relative pitch and compass. They are not fitted for the use of crooks. Though extensively employed in military music, only two, the Euphonium and Contrabass-tuba, have achieved a place in the orchestra.—The nomenclature of the saxhorn family being sadly confused, a list with the various appellations is annexed:

1. Soprano saxh. (petit saxh., petit bugle à pistons, Piccolo in $E\flat$).
2. Soprano saxh. (contralto saxh., bugle-ténor, Flügelhorn in B).
3. Alto saxh. (Alhorn in $E\flat$).

6. Low bass saxh. (bombardon en $m\flat$).
7. Contrabass saxh. (bombardon en $s\flat$ grave, Kontrabasstuba).

Saxhorns 1 to 4 are classed as *bugles à pistons*; while 5 to 7 are classed as *tubas* or *bombardons*.—Their extreme compass is:

in turn comprising 2 individuals a whole tone apart:

1. Soprano saxophone in F (and $E\flat$).
2. Soprano " " C (" $B\flat$).
3. Contralto " " F (" $E\flat$).
4. Tenor " " C (" $B\flat$).

(Comp. *Key*). . . *Pentatonic scale*, a "5-tone" scale found in primitive melodies of certain peoples (Scotch, Chinese), in which the step of a semitone is avoided by omitting the 4th and 7th degrees in major and the 2nd and 6th in minor. It can be played on the piano by touching 5 successive black keys, beginning on *F#* for major, and on *E♭* for minor. The ancient Greek chromatic scale also had five tones.—2. The series of tones producible on various wind-instr.s is also called a *scale*, whether the series is diatonic or not; the term is also used for the compass or range of a voice or instr.—*Harmonic scale*, the series of higher partial tones (see *Acoustics*).—3. The tube is of wood, covered with leather, about 8 feet long, and provided with 6 finger-holes and a varying number of additional keys.  Compass: the serpent being a transposing instr., in Bb, the notes are written a degree higher. The tone is variously described by French authorities as "harsh and savage", and as a "cold, horrid howling". Solmisation. A method of teaching the scales and intervals by syllables, the invention of which is ascribed to Guido d'Arezzo (b. 990?). It is based, in opposition to the Greek theory of *tetrachords*, on the *hexachord* or 6-tone scale: the first six tones of the natural major scale, *c d e f g a*, were named *ut, re, mi, fa, sol, la*, (the initial syllables of the successive phrases of a hymn to St. John beginning *Ut queant laxis*, these syllables happening to fall on these 6 tones), forming the *natural hexachord* (*hexachor'dum natura'le*) with the semitonic step at *mi-fa*; the syllables were further applied to 2 other hexachords, the *hard hexachord* (*hex. du'rrum*) *g a b c d e* (so called because constructed with the hard *B = B♯* or *B durum*), and the *soft hexachord* (*hex. mol'le*) *f g a b♭ c d* (with the soft *B = B♭* or *B molle*); in each, the step *mi-fa* was in the same relative position. The entire mus. scale, extended beyond that of Greek theory by adding 1 tone below (*Gamma Γ = G*), and 4 above, embraced 7 hexachords, the higher ones being mere reduplications of the original 3. In the following View, the solmisation-names of the notes will be found by reading up from (and including) the letter-name; thus low *G* was called *Gamma-ut*, its octave *G sol re ut*, and its double-octave likewise *G sol re ut*; *B*, however, was called only *B fa* or *B mi*, according as it occurred in the soft or hard hexachord.

When a melody overstepped the compass of one hexachord, a transition, termed a *mutation*, was made from one

set of syllables to another; the change of syllables was preferably effected between the natural and soft, or natural

and hard, hexachords (a direct transition from hard to soft, or vice versa, being less smooth because of the clashing significance of $B\flat$ and $B\sharp$), and usually after *fa* (*sol = re*) in ascending and after *mi* (*re = la*) in descending. These mutations exhibit a dawning of the modern idea of modulation, the final victory of which, in establishing the major and minor modes and freely transposable scales, disposed of the system of hexachords.—During the supremacy of the mediæval modes, this system sufficed for the composer's needs; but after the recognition of the leading-note, and the general adoption of a corresponding 7th syllable *si* early in the 17th century, the modern 7-tone scale, or *heptachord*, gradually superseded the hexachord in theory and practice. Many proposed changes in the syllable-names met with merely local and transient favor; among them, those of Waelrant of Antwerp in 1550 (*bo, ce, di, ga, lo, ma, ni*), called *Bo-cedisation* or *Bobisation*, Pedro d'Urenna in 1620 (*ni* for *si*), Hitzler of Stuttgart in 1628 (*la, be, ce, de, me, fe, ge*, called *Bebisation*), Graun in 1750 (*da, me, ni, po, tu, la, be*, called *Damenisation*). In Italy, and afterwards in all Europe excepting France, the syllable *do* (presumably first used in 1673, by Bononcini) has ousted the original *ut* (comp. *Do*). In both France and Italy the *syllables* have, in everyday usage, quite supplanted the *letter-names* of the notes, which are employed in Germany, Holland, England, and the United States.

Suite (Fr.) A cyclical instrumental composition consisting of a set or series of pieces in various idealized dance-forms. It originated, presumably, in the practice of the town-bands, during the later middle ages, of stringing together a succession of dance-tunes, differing in character and form but alike in key. These are the characteristic features of the old Suite, which was taken up in the 17th century by composers as a form of clavier-composition under the name of *Partie* or *Partita*. The extension of the primitive forms, naturally resulting from instrumental treatment at the hands of Italian and German musicians, was cut short by Couperin (1668-1733), who in many respects served Bach as a model; the *Kammersuiten* of the latter mark the culmination of the old suite-form.—The earlier artistic Suites have 4 principal movements or divisions: The Allemande, Courante, Saraband, and Gigue; other forms introduced at will (*intermezzi*) are the Bourrée, Branle, Gavotte, Minuet, Musette, Passepied, Loure, Pavane, etc.; such an *intermezzo* was usually brought in between the Saraband and Gigue, rarely before the

former.—The *modern orchestral Suite* can hardly be called a revival of the old form, as the separate movements are not necessarily or generally in dance-form, nor do they keep to one key; it more nearly resembles the *Divertimento*, both in character and form.

Suivez (Fr., "follow".) Same as *Colla parte*.—Also, "continue," "go on" (i. e., in like manner); *simile*.

Swell. 1. In the organ, a contrivance for producing a *crescendo* and *diminuendo*. By enclosing a partial organ (swell-organ) in a box, the front of which could be opened or shut at will, this end was attained. In the modern (so-called *Venetian*) swell the front of the swell-box is composed of movable parallel shutters (swell-blinds); when these shutters are horizontal, they are usually opened by a lever (swell-pedal) worked by the organist's right foot, and close automatically when the lever is released (but comp. *Balance swell-pedal*); when vertical, they are closed by a spring.—Formerly other devices were employed, notably the *nag's-head swell*, a single broad shutter in front of an echo-organ, to be raised or lowered.—On the harpsichord a swell was obtained by a movable cover.—2. A *crescendo* ($\text{<=>$), or *crescendo and diminuendo* ($\text{<=>=>$)... *Swell-keyboard*, the manual controlling the

Relating or pertaining to a symphony. . . *Symphonic poem* (Ger. *sympho'nische Dichtung*; Fr. *poème symphonique*), an orchestral composition allied, both in its length and in the power and variety of its instrumentation, to the symphony; but radically differing from the latter by discarding the orthodox form (division into the regular movements), and in being directly based on and receiving its inspiration from a *program* (the *poem*; i. e., it is conceived as an instrumental poem, depicting events, scenes, or moods like a word-poem). This "fairest flower" of program-music can necessarily have no fixed form, but its continuous flow is moulded into a sort of unity by the repetition of the same theme variously modified and transformed.

A music-box, consisting essentially of a graduated comb-like series of steel teeth, and a thin flat metallic disk caused to rotate by clockwork, and in which the notes are punched in such a manner that short tongues of metal project from the lower side of the disk; in rotating over the steel teeth, these tongues engage a series of small wheels furnished with projecting studs, which twang the teeth in the same way as the studs on the cylinder of the ordinary Swiss music-box. The instr.s are made in all sizes, and as the note-disks are interchangeable, the repertory is limited only by their number (now several thousand).

Symphoniste (Fr.) 1. A composer.—2. A symphony-writer.—3. A member of a symphony-orchestra.

Symphony. (Ger. *Symphonie'*, *Sinfonie'*; It. *sinfoni'a*; Fr. *symphonie*; from the Gk. *symphoni'a*, "consonance", i. e. consonant interval.) 1. A form of instrumental composition developed from the *Overture* (*q. v.*), the 3 divisions of which latter were separated towards the middle of the 18th century, by composers writing purely orchestral pieces, into 3 distinct movements; the 4th (the Minuet) being introduced by Haydn, who thus consummated the modern 4-movement form. This form is identical with that of the Sonata (comp. *Form*). For the Minuet, Beethoven substituted the *Scherzo*, which since then has been the typical form of the 3rd movement. Haydn also transferred the "first-movement" form of the sonata to the symphony, and utilized the individual timbres of the various instr.s for contrasts in orchestration; the perfection of instrumental individualization is the work of Mozart and Beethoven, and the latter enlarged the symphony-orchestra to its modern status (comp. *Orchestra*). The usual plan of the symphony is now I (*Allegro* [in first-movement form, often with a slow introductory division]); II (*Adagio*); III (*Scherzo*); IV (*Allegro* or *Presto*).—Its latest development is the Symphonic Poem.—2. Same as *Ritornello* 1.—3. A medieval name for several instr.s, as the Hurdy-gurdy, Bagpipe, etc.

Synco'pation. (Ger. *Syn'kope*; Fr. *syncope*; It. *sin'cope*.) The tying of a weak beat to the following strong beat, effacing the accent naturally falling on the latter and in most cases shifting it to the (naturally unaccented) weak beat. Syncopation may take place in one, several, or all parts; in the first two cases as an anticipation, a suspension, or a resolution of either (as a resolution the accent is weakest, or quite elided, particularly when concluding a phrase); in the third case, or in anticipation, the accent is apt to have a *sforzando* character.

Tab'lature. 1. (Ger. *Tabulatur'*.) The rules and regulations for the poetry and song of the Meistersinger.—2. (Ger. *Tabulatur'*; Fr. *tablature*; It. *intavolatura*.) An obsolete system of musical notation employed chiefly for the lute, viol, and organ, and most in vogue from the 15th century till early in the 18th.—The *organ-tablature* (also called *German t.*) used for keyboard instr.s was a system of alphabetical notation based on the division of the mus. scale into the octaves C—H (= B), c—h (= b), etc.; the melody (highest part) was often noted on a staff, the accompanying chords being expressed by vertical rows of letters. In the *lute-tablatures* (excepting the German) the tones were represented by letters (*French* or *English t.*) or numerals (earlier *Italian t.*) indicating the frets at which the strings were to be stopped, and were written on the lines or in the spaces of a kind of staff, said lines or spaces showing the number of strings on the instrument. The pitch of the tones represented by the letters or figures would therefore vary with the size of the lute, and was not a staff-notation in the modern sense.—Three leading features were common to nearly all systems of tablature: (1) The vertical disposition of the characters representing one chord; (2) the use of bars to divide the measures; (3) a system of signs for marking the time-value of the tones called for by letters or figures (or of the corresponding rests), these signs being written either above or below the latter, and signifying:

Note-Signs.	Rest-Signs.	Time-Value.
•	—	Brevis ()

- Te'ma** (It.) Theme.
- Temperament.** (Ger. *Temperatur'*; Fr. *tempérament*; It. *temperamen'to.*) A compromise between the acoustic purity of theoretically exact intervals, and the harmonic discrepancies arising from their practical employment.—E. g., taking the tone *C* as a starting-point, and ascending by quint-strides through a series of 12 perfect fifths (*C*...*B#*), we reach a tone (*B#*) which, on instr.s of fixed intonation (like the pftc.), is identical in pitch with the sixth octave of *C* (*c⁶*), but which, as an acoustic interval, is by $\frac{7^4}{73}$ higher than *c⁶*. A similar result is obtained by descending through 12 fifths to *D \flat* , which proves to be lower by $\frac{7^4}{73}$ than the corresponding lower octave of *C*. Now, by setting *C* = *B#* = *D \flat* , and equally distributing the deviation $\frac{7^4}{73}$ among the 12 quint-tones in either series, i. e. by *tempering* each fifth, the deviation for each becomes practically unnoticeable on keyboard instr.s; such equal distribution is called *equal temperament*.—Another example: The tone *A \flat* , as

the major tierce below *C*, has the ratio 4:5; the tone $G\sharp$, as tierce of the tierce of *C*, has 25:32; that is, $G\sharp$ is by $\frac{1\frac{1}{2}}{2\frac{1}{2}} = \frac{3}{5} \div \frac{3}{5} = \frac{3}{5}$ lower than *A* \flat .—If it be attempted, as formerly, to take note of and employ in practice even only the most noticeable of the different shades of intonation (e. g. by building keyboards with separate keys for $C\sharp$ and $d\flat$, $d\sharp$ and $e\flat$, etc.), the tones in each octave of our keyboard instr.s would evidently have to be greatly increased in number beyond the ordinary chromatic scale of 12 degrees. However, a perfect fifth ($\frac{3}{2}$) differs from a tempered one by only about $\frac{2}{3}\frac{2}{3}\frac{2}{3}$ [HELMHOLTZ], an interval close to the extreme limit of perceptible differences in pitch, and the use of such an interval instead of a perfect fifth can in very few cases be regarded as objectionable. In the system of equal temperament the series of fifths, instead of going on indefinitely, returns to the starting-point *C*, thus forming a circle, as it were; this progression from end to end of the series is called the *Circle of Fifths*:

Unequal temperament is a system in which the excess in the series of fifths is not equally apportioned, some intervals being purer, and others less pure, than in equal temperament. In the *mean-tone system*, once extensively employed, the major thirds were tuned true, and divided into two equal tones forming a mean between the greater and lesser whole tone, hence the term *mean-tone*; each fifth was $\frac{1}{4}$ comma too flat, making the 12th in the series about 2 commas out of tune, this error being usually laid upon the fifth the system also had 4 thirds which were too sharp by nearly the same interval. The

discordant effect produced by chords containing any of these anomalous intervals was called the "wolf".

Tempo-mark. (Ger. *Tempobezeichnung.*) A word or phrase indicating the pace or speed of a movement, and thus establishing the absolute time-value of the notes.—Generally accepted tempo-marks were hardly known before the beginning of the 17th century, and were used sparingly until the 18th.—There are 3 classes: (1) indicating a steady rate of speed; (2) indicating acceleration; (3) indicating a slackening of the pace.—They do not in themselves indicate a fixed and positive rate of speed, but only the general character of the movement; consequently, for the sake of precision, a metronome-mark is often added to the tempo-mark; e. g. "*Adagio*, M. M. $\text{♩} = 56$," signifies a tranquil movement in which a quarter-note has the time-value of one beat of the metronome set at 56. Fur-

thermore, various qualifying words are added (comp. the several Key-words).

Ten'or. (Ger. *Tenor'*; Fr. *ténor* or *taille*; It. *tenóre*.) 1. The high natural male voice. The Germans distinguish 2 classes of tenors, the *Helldentenor* (dramatic tenor), and *lyrischer Tenor* (lyric tenor);

the compass of the  former is from *c* to *b*⁴ the voice full and powerful throughout, with a barytone timbre; the range of the latter is  the about from *c* to *c*⁵ (*c*⁵♯) *e* *s* *t* tones usually rather weak, the high tones brilliant, and the timbre generally bright and pleasing. The Italian terms nearly corresponding to the above are (1) *tenóre robu'sto*, *tenore di for'za*, and (2) *tenore di gra'zia*, *t. leggie'ro*; but they are very variously and arbitrarily employed.—2. The 2 tongues left between, when struck by the sticks, yield 2 different tones, at an interval—in various instr.s—of a third, fourth, fifth, sixth, or octave apart. It serves to mark the rhythm, and as an imperfect bass, in the aboriginal music. It is played with 2 sticks, the heads of which are covered with wool or an elastic gum.

tem'po.) The division of the measure into equal fractional parts of a whole note (\ominus), forming a standard for the accentuation or regular rhythmic flow of the movement. The sign for time is called the *time-signature*, and is usually in the form of a fraction set immediately after the clef at the beginning of the movement, the numerator indicating the number of notes of a given kind in each measure, while the denominator shows the kind of notes taken as the unit of measure; e.g. $\frac{3}{4}$ (three-four time) means 3 quarter-notes to a measure, | ; $\frac{12}{16}$ (twelve-sixteen time) means 12 sixteenth-notes to a measure, | , etc. Among the numerous systems of nomenclature the ordinary *English method* is still that most in use, and is employed throughout this Dictionary; some others are appended for the purpose of comparison.—There are 2 classes of time, *Duple* and *Triple*.

In *Duple* time the *number of beats* to the measure is divisible by 2; in *Triple* time, by 3. There are also 2 subclasses, *Compound Duple* time, and *Compound Triple* time. In *compound duple* time the number of beats to each measure is still divisible by 2, but *each beat* contains, instead of an ordinary note divisible by 2, a dotted note (or its equivalent in other notes or rests) divisible by 3; hence the term *compound*, each simple beat being represented by a dotted or compound note divisible by 3, instead of a simple note divisible by 2. In *compound triple* time not only the number of beats in each measure is divisible by 3, but also each beat, as above. (See Table on p. 201.)

Another English classification is the following; it contains the times ordinarily employed, to which should be added *simple octuple* time $\frac{8}{8}$, and *compound octuple* time ($\frac{8}{6}$), both with eight beats to the measure:

(From Troutbeck & Dale's Music Primer.)

	Duple.	Triple.	Quadruple.
Simple.	C or $\frac{2}{2}$ 	$\frac{3}{2}$ 	C or $\frac{4}{2}$ 
	$\frac{2}{4}$ 	$\frac{3}{4}$ 	C or $\frac{4}{4}$ 
	$\frac{2}{8}$ 	$\frac{3}{8}$ 	$\frac{4}{8}$ 
Compound.	$\frac{6}{4}$ 	$\frac{9}{4}$ 	$\frac{12}{4}$ 
	$\frac{6}{8}$ 	$\frac{9}{8}$ 	$\frac{12}{8}$ 
	$\frac{6}{16}$ 	$\frac{9}{16}$ 	$\frac{12}{16}$ 

A proposition made in the above work, to indicate the *compound* times by the same signatures as those of the

simple times, merely *adding a dot* to the denominator to show the tripartite division:

Compound.	$\frac{2}{2\cdot}$ 	$\frac{3}{3\cdot}$ 	$\frac{4}{4\cdot}$ 
	$\frac{2}{4\cdot}$ 	$\frac{3}{4\cdot}$ 	$\frac{4}{4\cdot}$ 
	$\frac{2}{8\cdot}$ 	$\frac{3}{8\cdot}$ 	$\frac{4}{8\cdot}$ 

is deserving of notice as an ingenious way of marking the number and position of the beats; the measure-note being found in each case by multiplying the denominator by 2.

Still another, and highly ingenious, system, by Mr. Frederick Niecks, is given below; for the terms *duple* and *triple* he substitutes *binary* and *ternary*, referring, not to the number of beats, but to the grouping of the measure-notes in twos and threes.

Simple Times.

Simple Binary Time	$\frac{1}{2}$	$\frac{2}{4}$	$\frac{3}{8}$	$\frac{4}{16}$
“ Ternary “	$\frac{2}{3}$	$\frac{4}{6}$	$\frac{8}{16}$	$\frac{16}{64}$

Compound Times.

Duple Binary Time	$\frac{4}{2}$	$\frac{4}{4}$	$\frac{4}{8}$	
“ Ternary “	$\frac{6}{2}$	$\frac{6}{4}$	$\frac{6}{8}$	$\frac{6}{16}$
Triple “ “	$\frac{9}{4}$	$\frac{9}{8}$	$\frac{9}{16}$	
Quadruple “ “	$\frac{12}{4}$	$\frac{12}{8}$	$\frac{12}{16}$	

Finally, a system has been suggested in which the word *rhythm* is substituted for *time*; *duple* and *triple* retained for the *simple forms* of the measure; while the *complex forms* are called *quadruple rhythm*, *sextuple rhythm*, *octuple rhythm*, etc.—However, the desideratum of any new system, i. e. the plain expression of the number of beats to the measure as well as of the number of notes of a given kind, is not yet attained; and well-meant half-reforms serve only to make confusion worse confounded. . . . *2-time*, *3-time*, abbreviations of *duple* and *triple time* respectively.

Tisch'harfe (Ger., “table-harp’’) A variety of autoharp.

Tocca'ta (It., from *tocca're*, to touch.) An early species of composition for keyboard instr.s, originating in Italy toward the close of the 16th century. In style it is free and bold, approaching the (old) fantasia; it has no distinctive form, but consists of runs and passages alternating with fugued or contrapuntal work, built up in the more elaborate specimens on a figure or theme, generally in equal notes, with a flowing style and lively, rapid movement.—*Toccati'na*, *Toccatel'la*, diminutives of *Toccata*.

Tocca'to (It.) In trumpet-music, a fourth (bass) trumpet-part added as a substitute for the kettledrums.

To'(d)tenmarsch (Ger.) Dead-march.

Ton (Fr.) 1. Tone; pitch; *donner le ton*, to give the pitch.—2. Mode.—3. Scale, key.—4. A crook (*ton de rechange*).—5. (Formerly) a tuning-fork... *Ton bouché*, stopped tone (horn)... *Ton d'église*, church-mode... *Ton de rechange*, crook... *Ton entier*, whole tone... *Ton feint*, see *Fictum*... *Ton majeur* (*mineur*), a major (minor) key... *Ton ouvert*, open or natural tone (on a wind-instr.)... *Ton relatif*, related key... *Ton générateur*, one of the 7 natural tones.

Tonal. Pertaining to tones, or to a tone, mode, or key... *Tonal fugue*, see *Fugue*... *Tonal imitation*, imitation not overstepping the limits of the key of a composition; non-modulating imitation.

Tonal'ity. (Ger. *Tonalität*; Fr. *tonalité*.) The term *Tonality*, as contrasted with *Key*, is distinguished by its broader significance and wider scope. *Key* denotes simply the *mode* (of a piece) and the pitch of that mode; strictly, it refers solely to the harmonies constructed from the tones of its own diatonic scale.

On quitting these harmonies, even by touching an "altered chord", it trespasses on the domain of *tonality*; for—here is the dividing line—*key* embraces the *diatonic harmonies* referable to *one tonic chord* as the point whence they depart and whither they return, whereas *tonality*, taking this same tonic chord as a starting-point, includes any and every harmony related to it, so long as no actual change of tonic is brought about by a modulation. *Tonality* might therefore be briefly defined as the chords grouped around and attracted by one central tonic chord, and thus appears as founded upon the relations of chords independent (in a measure) of key. (Comp. *Phone*, § 4.)

Tone. (Ger. *Ton*; Fr. *son*, *ton*; It. *tuò'no*, *suò'no*.) See *Acoustics*... *Tone-color*, quality of tone.

Tongue. 1 (noun). Same as *Reed*; but, in the so-called reed of an organ-pipe, the *tongue* is the vibratile slip of metal producing the tone.—2 (*verb*). To employ the tongue in producing, modifying, or interrupting the tone of certain wind-instr.s... *Tonguing*, the production of effects of tone, on wind-instr.s, by the aid of the tongue. *Single-tonguing*, the effect obtained by the repeated tongue-thrust to the nearly inaudible consonant *tor d*; *Double-tonguing*, that obtained by the repetition of *t k*; *Triple-tonguing*, by *t k t*; etc. With reed-instr.s, single-tonguing only is applicable.

Tonic. (Ger. *To'nika*; Fr. *tonique*; It. *to'nica*.) 1. The key-note of a scale.—2. In the new system of harmony, the *tonic chord* (in C-major the major triad on C; in C-minor the minor triad on C) is designated as the tonic. (Comp. *Phone*.)... *Tonic chord*, one having the key-note as root... *Tonic pedal*, organ-point on the key-note... *Tonic section*, a section or sentence in the key in which a composition began, with a cadence to the tonic of that key... *Tonic Sol-fa*, a method of teaching vocal music, inv. by Miss Sarah Ann Glover of Norwich, England, about 1812, and perfected by the Rev. John Curwen, who became acquainted with the method in 1841.—Its formal basis is the "movable-Do" system; the 7 usual solmisation-syllables are employed, but Englished as follows

doh ray me fah so^l. lah te ;

each is represented in notation by its initial letter (d r m etc.), to which a vertical dash is added above or below when a higher or lower octave is entered; thus s, d d' in a soprano part would be equivalent, in G-major, to

For teaching the tones and modulation, these tone-names are arranged in a musical chart called a Modulator:

d ^l	f ^l	
t	— m ^l	— l
l	= r ^l	— s
s	— DOH ^l	— f
	TE	— m
f	ta	le
m	— LAH	= r
r ^{la}	— SOH	— d
	ba fe	
d	— FAH	t ₁
t ₁	— ME	— l ₁
	ma re	
l ₁	= RAY	— s ₁
	de	
s ₁	— DOH	— f ₁
	t ₁	— m ₁
f ₁		
m ₁	— l ₁	= r ₁
r ₁	— s ₁	— d ₁
		t ₂
d ₁	— f ₁	—
t ₂	— m ₁	— l ₂

This arrangement shows the exact position of each tone in its relation to the key-tone; in fact, the fundamental principle of the method is key-relationship, and that the character of every

tone is decided by the relation which it holds to its tonic, the name Tonic Sol-fa signifying "solfaing according to the tonic principle". The system of tonic sol-fa insists upon the mental effect of each tone in relation to the tonic, i. e. the pupils are taught to recognize the tones of the scale by observing the mental impressions peculiar to each.—The parallel columns of the Modulator show the relation of key to key, and may be extended through all the sharp and flat keys, the former lying to the right, the latter to the left of the central column. Sharped tones take the sharp vowel *e*, flat tones the broad vowel *a* (ah). In modulating, so-called *bridge-tones* are added in the notation in the form of small letters indicating the relation of the modulating tone to the key just left, the large letter showing the relation of the tone to the new tonic; thus ^ad means, that *soh* of the old key is *doh* of the new, as in modulating from C-major to G-major. For a mere chromatic passing-note, however, or a transient modulation, the chromatic syllables are employed. In the printed notation, equal spaces represent equal times, and fractions of time are shown by fractions of space; the beats ("pulses") are represented by regular intervals of space. A thick bar marks the primary accent (strong pulse); the weak pulse is preceded by a colon; a shorter bar marks the secondary accent; a dot midway in a pulse-space marks a half-pulse; and quarter-pulses are marked by commas. The continuation of a tone is indicated by a dash, while a rest (silence) is left simply as a blank space.—In lieu of protracted explanations, the hymn "America" is here appended in the Tonic Sol-fa notation:

GOD SAVE THE QUEEN.

(America.)

Tremulant. A mechanical device in the organ for producing a tremolo. It consists of a valve or arm of thin metal which, when set in action by a draw-stop, partially checks the inflow of wind, by which latter it is forced to oscillate rapidly, the consequent alternate checking and admission of the wind to the pipes causing a tremulous tone.—Organ-pipes producing a similar tone without the tremulant are those of the *Piffaro*, *Unda maris*, etc.

Trill. (Ger. *Tril'ler*; Fr. *trille*; It. *tril'lo*.) (Also *Shake*.) [Sign *tr* or *tr* ~~~; obs. *t.*, +, ~~~, or (~~~~) etc.] A grace occupying the entire time-value of the principal note.

being the rapid and even alternation of the latter with a higher auxiliary (the maj. or min. second above); except when the time for its execution is so brief as to reduce it to a mere turn, or an inverted mordent.—In modern mu-

sic, the trill generally begins on the principal note (*a*), and ends with an after-beat (*b*), which should be written out; if to be begun on the auxiliary, an appoggiatura should be set before the principal note (*c*).

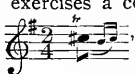

A dotted quarter-note would call for one more group of 4 16th-notes; a ♪ for 2 such additional groups; etc.

These are the typical forms of the *long trill*; they differ in different kinds of time; e. g.

or when preceded by an ascending appoggiatura :

the tempo also exercises a controlling influence, the following trill:  performed:

Andante.  passing over into

 (Allegro), or 

(Presto). The last is one form of the *short trill*, which might, in turn, become a long trill in *presto*, when the

time-value of the principal note permits of such extension, e. g.

No. 6, written thus :

(All^o. commodo) 

would be executed: 

The after-beat may be modified *chromatically*, as at No. 3, or thus :

It is often in place when not written out (comp. Ex. *b* under *chain of trills*); its introduction is then either a matter of taste, or depends on what follows,

it being usually required where the trill is followed by an accented note; though the next three examples require no after-beat :

Successive trills, even though alike in notation, may differ in execution by

reason of the notes immediately preceding them :

A trill on several tones in direct succession is called a *chain of trills* ;

it may be performed with or without an after-beat :

though in case any step is merely a chromatic alteration of a principal note, the after-beat is best omitted :

the following requires short trills like inverted mordents :

—The only rule now universally appli-

—In the 17th and 18th centuries, and early in the 19th, a common practice was to *begin* the trill on the *auxiliary*, and end on the principal note. —For varieties of the trill indicated by the signs (*tr*, *tr*, *tr*, *tr*) etc., compare *Graces*, *Mordent*, *Signs*... *Double* and *Triple Trills*, in alternate thirds, sixths, etc., for both hands, frequently occur in modern pftc.-music.

GROVE.)... *Trillo capri'no*, see *Bocks-triller*.

Trink'lied (Ger.) Drinking-song.

Tri'o (It.) 1. A composition for 3 voices or parts. (*a*) The *Instrumental Trio*, usually in sonata-form, is most commonly either a *Pianoforte Trio* (pftc., violin, 'cello), or a *String Trio* (violin, viola, 'cello; or 2 violins and 'cello). Compositions for 3 concerted instruments, accompanied by a fourth playing a *basso continuo*, were formerly also styled trios... An *Organ Trio* is a 3-part organ-piece for 2 manuals and pedal, the registration of the manuals being strongly contrasted.—(*b*) The *Vocal Trio* is usually in song-form or aria-form.—2. In minuets, marches, scherzi, etc., the trio or *alternativo* is a

division set between the first theme and its repetition, and contrasting with it by a more tranquil movement and *cantabile* style; called "trio" because written in 3 parts, in contrast to the ordinary 2-part style of the principal subject.

Tril'lerkette (Ger.) Chain of trills.

Tril'lo (It.) Trill. (N. B. The *trillo* described in Caccini's *Singing Method* (1601) "consists of the rapid repetition of a *single note*... He also mentions another grace which he calls the *Gruppo*, which closely resembles the modern shake :

division set between the first theme and its repetition, and contrasting with it by a more tranquil movement and *cantabile* style; called "trio" because written in 3 parts, in contrast to the ordinary 2-part style of the principal subject.

Trio'le (Ger.), **Triolet** (Fr.) Triplet.

Trois (Fr.) Three... *Mesure à trois-deux*, 3-2 time; *à trois-huit*, 3-8 time; *à trois-quatre*, 3-4 time.

Troll. A round or catch.

Trom'ba (It.) A trumpet... *Tr. cromat'ica*, chromatic trumpet, valve-trumpet... *Tromba mari'na* (*Sea-trumpet*, *Marine trumpet*, *Nun's-fiddle*; Ger. *Non'nengeige*, *Trum'scheit*), a very ancient single-stringed bow-instr., having for a body a long thin wooden shell made of several staves, a flat belly, short neck, and 1 thick gut string generally tuned to *C* (sometimes one or more additional strings as drones). One foot of the bridge rests loosely on the belly, the harsh vibration thus induced rendering the tones very powerful, so that the instr. was formerly used in the English navy for signalling. The natural harmonics have a far more pleasing quality of tone, which accounts for the comparative popularity of the instr., in Germany, from the 14th to the 16th century, in German churches and convents (whence the name "*Nonnengeige*"),

nuns'-fiddle). It occasionally had an additional octave-string, and some specimens were provided with sympathetic strings *within* the body... *Tr. sorda*, muted trumpet... *Tr. spezza'ta*, earlier name for the *tromba bassa* (bass trumpet).

Trombet'ta (It.) 1. (Also *trombettato're*, *trombettie're*, *trombetti'no*.) A trumpeter.—2. A small trumpet (dimin. *trombetti'na*).

Trombone'. 1. (It. and Fr. *trombo'ne*; Ger. *Posau'ne*.) An orchestral wind-instr. of metal, belonging to the trumpet family, with the distinctive feature of the slide-mechanism (see *Slide*), in which shape it dates probably from the 15th century. It is constructed in 4 sizes (alto, tenor, bass, and the more recently added contrabass); the *tenor trombone* is the one in most general use. Gevaert suggests that the *tromba da tirarsi* of Bach's scores was possibly a *soprano tr.*, the place of which was usually supplied by the *cornetto*.—It is a non-transposing instr., and is written in the *C*-clef (alto or tenor) for the alto and tenor instrs., and in the *F*-clef for the bass and contrabass. In playing, there are 7 positions, obtained on successive descending semitonic degrees by gradually drawing out the slide, the 1st *pos.* being when the slide is pushed completely in, i. e. when the tube is shortest; in each position the tones which can be regularly made to speak are the partials 2 to 8. Utilizing all 7 positions, the tenor trombone in *B* \flat has a chromatic compass of  this is the regular orchestral compass, above which are the 4 difficult tones *b*¹, *c*², *c*² \sharp , and *d*²; while below, separated by a tritone from the rest of the scale, are the so-called pedal-tones  The orchestral compass of the *alto trombone* is *A*—*e*² \flat ; that of the *bass trombone* *B*₁—*f*¹.—The valve-trombone possesses greater agility than the slide-trombone, but is apt to be inferior to it in purity of tone. (Comp. art. *Trumpet*, last sentence.)—2. In the organ, a powerful reed-stop (same as *Posaune*).

Trumpet. 1. (Ger. *Trompe'te*; Fr. *trompette*; It. *tron'ba*.) An orchestral metal wind-instr. having a tube of somewhat narrow scale, and a cupped mouthpiece; the convolutions of the tube are straighter than in the horn, and the bell is much smaller; length of tube, for the typical pitch in *D*, is about 7 ft. 3¼ in. By the aid of crooks the pitch of the prime tone in the natural trumpet may be modified to any degree of the 12-tone chromatic scale (*A, B♭, B, C, D♭, D, E♭, E, F, F♯, G, A♭*; and also to high *A* and *B♭*). The natural trumpet has the following scale

which, by combining the tones obtained by using the various crooks, gives the following complete compass :

The tone is brilliant, penetrating, and of great carrying power; the stopped tones, however, are so disagreeable as to be practically useless. The trumpet is a transposing instr., and its music is written in the *G*-clef.—The chromatic or valve-trumpet is provided with 3

valves (comp. *Valve*). [N. B. With regard to the assumed inferiority in tone of the valve-trumpet and valve-horn, as compared with the natural instr.s, no less an authority than Gevaert writes: "The chromatic horns and trumpets, when well constructed,

possess all the qualities of timbre proper to the natural instr.s, in addition to their own resources".]—2. In the organ, an 8-foot reed-stop of powerful tone.

Turn. (Ger. *Dop'pelschlag*; Fr. *groupe*; It. *gruppet'to.*) Sign ∞ ; obs. ∞ , $\frac{2}{2}$, $\frac{2}{2}$ (*back turns*). A melodic grace consisting, in what may be termed the typical form (the *direct turn*), of 4 notes, a *principal note* (twice struck) with its *higher and lower auxiliary* (the maj. or min. second above and below, each struck once). The sign is set either after, or over, the note modified; a chromatic sign over or under the turn-sign alters the higher or lower auxiliary respectively.

I. Turn-sign after the note.

The image displays two musical staves. The top staff is in treble clef and shows a melodic line with a turn sign (∞) placed after a note. The tempo markings 'adagio' and 'presto or [easier]' are written below the staff. The bottom staff is also in treble clef and shows a similar melodic line with a turn sign after a note, with the number '5' written below it.

Except in extremely rapid movements, the principal note is dwelt on, before the turn, for one-half or $\frac{3}{4}$ of its time-value :

adagio molto prestiss. adagio

and the turn is executed in equal notes. But a dotted principal note usually loses a larger proportion of its value :

adagio allegretto

prestissimo or adagio

and in a slow movement the second member of the dotted rhythm (e. g. the *d* in the last example) is frequently robbed of half its value, which is added to the repercussed principal note ; this form is occasionally called a *partial turn*. Mozart sometimes carelessly wrote the turn thus :

to be played :

II. Turn-sign over the note.—In slow tempi, or where the principal note requires special stress, the turn may begin on the principal note, as in :

this last ornament was called the *shaked turn* (Ger. *prallender Doppelschlag*).

Commonly, however, this turn begins immediately on the higher auxiliary :

III. The **Back Turn** (sign the inverted or vertical turn-sign ∞ 2) begins

on the lower auxiliary, and the principal note is generally dwelt on after the turn :

IV. The sign for the **Double Turn** (∞) calls for a turn in 2 parts at once.

Valve. 1. (Ger. *Ventil*; Fr. *piston*; It. *val'vola*, *pisto'ne.*) In certain brass wind-instr.s, a device for diverting the air-current from the main tube to an additional side-tube, thus lengthening the air-column and lowering the pitch of the instrument's entire scale. By the aid of valves, *natural* instr.s are

altered to *chromatic* instr.s commanding a chromatic scale throughout their compass. (Compare *Horn, Trumpet*; also *Key* 3.)—The valves are operated by the fingers of the right hand; their usual number is 3, No. 1 lowering the pitch by (approximately) 1 tone, No. 2 by a semitone, and No. 3 by 1½ tones. Two systems are in ordinary use; the *Piston-valve*, and the *Rotary Valve*.—(a) The *Piston-valve* is a cylindrical plunger working in an air-tight cylinder, terminating in a short rod surmounted by a button, and pierced crosswise by 2 round holes; the enclosing cylinder is similarly pierced, on either side, one perforation communicating with the main tube, the other with the side-tube. When the piston is not depressed, one of its holes is opposite to those in the cylinder which communicate with the main tube, so that the open (natural) tone of the tube can be sounded; on depressing the piston with the finger, communication with the main tube is cut off, but opened with the side-tube, so that the lower tone sounds. On releasing the piston, a spiral spring causes its return to the original position.—The *Rotary Valve* is "a four-way stop-cock turning in a cylindrical case in the plane of the instrument, 2 of its 4 ways forming part of the main channel, the other 2, on its rotating through a quadrant of the circle, admitting the air to the side-tube". Its manipulation is lighter than that of the piston, but it is more liable to derangement.—2. In the organ, the principal valves are the *suction-valves* or *suckers* admitting wind to the bellows and preventing its escape; the *waste-pallet*, relieving the bellows of an over-supply of wind; and the *key-valves* or *pallets*.

Mozart, and fully developed by Beethoven) may employ the strongest contrasts of rhythm, harmony, and tonality, the sole limitation being that a memory—so to speak—of the theme shall in one way or another be kept alive throughout.

Vi'ol. (It. *vio'la*; Ger. and Fr. *Vio'le*.) Name of a very ancient type of bow-instr., now obsolete; the prototype of the violin tribe (but comp. *Lira*), from which it differed by having a fretted fingerboard, a variable number of strings (from 5 to 8 or more, though the usual number for all sizes was *six*), and in the shape of the body. Both belly (usually) and back (always) were flat, the ribs high, the bouts nearly semi-circular, the sound-holes like half-circles, and the upper half of the body narrow and pointed. The bridge being but slightly arched, and having to support so many strings, those in the middle could scarcely be touched separately with the bow; this circumstance, however, together with the number and peculiar tuning of the strings, greatly facilitated chord-playing, in which the violin is comparatively at a disadvantage. The tuning was as follows:

Viola alta. Viola tenore. Viola bassa. Violone.

(Treble viol.) (Alto or Tenor viol.) (Bass viol.) (Siva bassa. (Contrabass viol.)

i. e. in *fourths* with one *third* midway.—The viols formerly held, in conjunction with the lutes, the position in the orchestra now occupied by the violin, etc., and were not fairly ousted by the latter till the beginning of the 18th century. The *Bass Viol* (i. e. in viol-shape, but with fewer strings) is, indeed, still found in England, though superseded elsewhere by the double-bass of violin-type. The violin first supplanted the

treble viol; gradually the larger violin-types were invented, with the above-mentioned result. During the transition, the frets were gradually discarded.

Viofe (Fr.) Formerly, a viol; now, a

A description of the treble violin, the typical instr. of the family, will suffice for all its members.—The *resonance-box*, or *body*, is formed by a vaulted belly (bearing the *bridge*) and *back*, joined by narrow sides called *ribs*; the *waist* is the narrow middle portion between the incurving *bouts*, at the *corners* of which, and also at other points within the body, are glued triangular pieces of wood called *blocks*, to strengthen the frame. Also inside, just beneath the treble foot of the bridge, is set a round wooden prop, the *soundpost*, placed there to resist the tension of the strings and to communicate their vibration directly to the back; the *bass-bar* further strengthens the belly. The curved apertures cut in either side of the belly are the *f-holes*, or *sound-holes*. At the bass of the body is the *button*, to which the wooden *tailpiece* is attached by a *loop* of gut; from the tailpiece the *strings* are stretched across the bridge and over the *fingerboard* (which lies partly upon the *neck* and partly over the belly) to the *nut*, and thence each to a separate *peg* in the *peg-box* or *head*, which ends in the *scroll*.—The word violin is from the It. *violino*, a diminutive of *viola*, meaning literally "small viol". Violin-music is written in the G-clef (*violin-clef*). The strings are numbered 1 2 3 4 from highest to low-

violin-type (see *Violin*), dating in its present form from the latter half of the 16th century. The word is a diminutive of *violone*, the It. augmentative of *viola*, thus meaning literally a "little big viol". The 'cello, as it is familiarly called, required more than a century to become popular, taking at first very subordinate parts, whence its designation, in many scores of the 17th century, as *Basso* or *Bass*. It slowly conquered the esteem of artists, and supplanted the *viola da gamba*, like which it is held, for playing, between the knees, while firmly supported on the floor by its pointed *peg* or *standard*. Violoncello-music is written in 3 clefs

for convenience of notation, and now invariably according to the actual pitch; but the classic masters, who also frequently used the G-clef in chamber-compositions, wrote the notes in this clef an octave higher than they actually sounded. . . *Violoncello piccolo*, see *Viola pomposa*.

Virgil Practice-Clavier. A toneless keyboard instr. for mechanical pft.-practice, inv. by A. K. Virgil, of New York, in 1883 (see *Techniphone*). It differs essentially from the old dumb piano in 2 features: (1) The depression, and also the release, of a digital produces a mild click like that of a telegraph-key; this furnishes a means for accurately timing the practice, for acquiring promptness of down-stroke and up-stroke, and for determining the different styles of touch (e. g. for the strict *legato* the click on depressing one digital exactly coincides with the release-click of the one preceding); (2) it affords, by a simple mechanical adjustment, 6 gradations in the weight of the touch, from 2 to 20 ounces—i. e. from the very lightest pft.-touch up to 5 times that of the average pft.-action, or more than the heaviest organ-touch.

There is hardly any subject on which opinions are more irreconcilably opposed, than this; but if we accept E. Behnke's definition (in his treatise: "Mechanism of the Human Voice") of the term *register*—"a series of tones which are produced by the same mechanism"—we arrive at his conclusion; namely, that there are 3 principal vocal registers in the female voice, and 2 in the male, the chief "break" occurring in both at  (This is the the tone transition from *f*¹ or *f*^{1#} "chest"-voice to falsetto in tenor voices.)

The second principal break in the female voice occurs  an octave higher at  In bass and bary-tone voices, the chief break occurs at  ors, also, there is a break at this point. (Comp. the above-mentioned treatise.)

Waits. [Also *Waytes*, *Wayghtes*, etc.] Originally, a class of street-watchmen in England, who gave notice of their approach by sounding horns or other instr.s. The name then appears to have been transferred to town-musicians, and still later to various irregular bands of indifferent music-makers, in which latter application it is not yet obsolete.—Whether the instr. chiefly affected by these musicians (a species of shawm or oboe) derived its name from them, or vice versa, is a moot point.
